ADA, INDIAN TERRITORY, THURSDAY EVENING, AUGUST 9, 1906

NUMBER 119

MORE WATER! ADA THE COMING FACTORY TOWN MUST HAVE IT

Oceans of water! That's what Ada wants now. One might think this a curious cry right at this time of deluges. But the fact is a colossal enterprise is knocking at our doors, and all it requires of us is a big water supply the year around.

There have been indefinite rumors for some weeks of a big cement plant being established here by Northern capitalists, but nothing of a definite nature was made public, all of which verifies the old proverb "that still water runs deep." The enterprise has materialized far enough now to warrant publicity. There arrived in Ada Wednesday from the East the following capitalists: A. L. Beck and C. C. Bishop, of Chicago; Wm. L. Whitaker and J. H. Edwards, of Mitchell, Ind., and J. M. Wintersmith, of Louisville. Last night they held a meeting and organized a corporation to be known as the Oklahoma Portland Cement Company. The incorporation will be perfected under the laws of the territory as soon as the papers can reach South McAlester for filing. The company is capitalized at \$300,000, all paid up, the majority of the stock being taken by the incorporators, who are the gentlemen above mentioned, together with A. T. Howe,

of Chicago; Peter Martin, of Huntington, Ind., and Geo. L. Kice, of Mitchell, Ind. The official roster of the company is as follows: A. L. Beck, president; C. C. Bishop, vice-president; J. M. Wintersmith, secretary-treasurer; Wm. L. Whitaker, general manager; the board of directors are: Beck, Wintersmith, Bishop, Martin and Kice. All of the stock is owned by non-residents and none is for sale.

Tersely stated, the purpose of the corporation is to manufacture cement, and on a big scale. Be it said in passing, this company has no connection with the Oklahoma City concern mentioned in a dispatch from that place a few days ago. In connection therewith one or more of these gentlemen's names were used, but entirely without authority. The company organized here owns 200 acres on the Frisco six miles south of Ada, acquired some time ago by Mr. Beck. The tract contains inexhaustible stores of limestone and cement shale. The plant for the manufacture of this raw product requires an enormous volume of water. If a sufficient supply of water is not forthcoming at Ada, the plant will be located somewhere on a big, reliable stream.

The amount of \$300,000 is to be the initial outlay for building and equipping the plant. From this one may get some idea of its magnitude: The main building will be 300x600 feet; the machinery will include one engine of 750 horse power, two of 150 each, two of 75 each, and two of 15 horse power each. Operations will begin with an output capacity of 1,500 barrels per day, though shafting will be installed with a capacity looking to an eventual output of 3,000 barrels. To begin with the payroll will be as much as \$300 per day. The ground necessary for the plant will be about 30 acres, which land the city of Ada will be expected to donate.

Now, as to the water question—and there's the rub. For the output of 1,500 barrels of cement 1,500 gallons of water must be utilized every minute, or 2,160,000 gallons every 24 hours. The cement men today have been making a thorough inspection of the city's present supply. They find upon test that the city pump at its utmost capacity pumps only 156 gallons a minute, although it was bought to have a capacity of 500 gallons. Pumping thus for 2 hours the big city well was lowered 8 feet. Ada has always had a

bountiful supply of water for all domestic and business purposes, besides furnishing water for railroad engines, yet how insignificant looks the present well supply when one contemplates watering so thirsty a thing as this big cement plant. But the water must be forthcoming if we get the works. True, only about 12 per cent of the water would be necessarily lost. The remainder, after condensation from steam, could be run back and used again; but in such case it would have to go through a cooling process, and, containing much cylinder oil, it could not be mingled with the city supply.

These business visitors are practical men, know their business thoroughly. They are not begging for anything—want nothing as a gift. If they build at Ada their switching expenses from the source of supply would be enormous. They could locate on a good stream somewhere and the water would cost nothing; so they figure that Ada should and must furnish the water supply to compensate them for hauling the raw material from the quarry. Ada can't afford to miss this thing, even though it should suck every well in the county dry. We've either got to dig deep or dam high.

LATEST NEWS FROM FLOODED DISTRICTS

Oklahoma City, Ok., Aug. 8.—Rain bordering on cloudbursts has been falling at Oklahoma City and various portions of the two territories at intervals since Sunday afternoon, resulting in congested railroad traffic, damage to crops, flooded streets and basements and overflowing streams. The damage will result in a loss of several thousand dollars.

The Atchison, Topeka & Santa Fe, Rock Island, Missouri, Kansas & Texas and Frisco railways out of this city report loss of bridges, inundated roadbed and numerous washouts.

From Purcell comes reports of numerous washouts and 200 feet of track under water.

At Lexington, Ok., just across the river from Purcell, Shoto creek is reported a half a mile wide, washing out the Santa Fe track to such an extent that it is necessary to detour trains via the Frisco from this city to Chickasha and thence to Ft. Worth, Texas, and Dallas over the Rock Island.

The Missouri, Kansas & Texas is enabled to operate trains from here to Kansas City, but on the Shawnee division all traffic is at a standstill on account of the loss of bridges, coupled with some fifteen track washouts.

No trains are running on the Rock Island between this city and South McAlester, the track in some places being

under 4 feet of water.

Reports from many Oklahoma and Indian Territory flooded districts today indicate increased damage to crops and railways due to swollen streams, which are rising at a remarkable rate.

No loss of life is reported, but considerable stock has been drowned.

SUPERINTENDENT WALKS.

W. E. Brown Takes a Tie Ticket from Konawa to Ada.

Muddy from head to foot, all haggard and torn, with a weary, melancholy expression upon his face, W. E. Brown, division superintendent of the M. & T., came strolling in today from Konawa. It was his duty to see the road, and he inspected it at the expense of a several hours' walk. We move a \$100 raise in salary, or promotion to the presidency of the road.

Rev. Sam Jones Dead.

Sulphur, I. T., Aug. 8.—Rev. Sam Jones, pastor of the Vinita Avenue Methodist church of this city, died last night at 10:30. He had been sick only since Thursday night.

J. P. Eddleman returned from Texas after a two months visit there. He was accompanied by Miss Erma Thomson who will visit the Eddleman family.

OUR HENRY M. FURMAN AT WILBURTON IND. TERRITORY

Wilburton, I. T., Aug. 8.—The greatest political rally ever held in this district was held in the opera house under the auspices of the Jefferson Democratic club of Wilburton. The meeting was a representative one of the district, composed largely of members of the trades unions. Much interest was taken from the fact that the meeting was addressed by two of the ablest speakers ever in this part of the territory. The Democrats were represented by Henry M. Furman, who spoke for two hours to an enthusiastic and appreciative audience, and he was applauded to the echo, though no mention was made by him of his candidacy for the United States senate. His remarks were confined mostly to the necessary measures to come before the constitutional convention that are being advocated by the labor unions. He was followed by Mother Jones, whose date conflicted with his and who had no hall in which to speak, therefore the Democratic and Socialist committees agreed to divide the time with her, as many of the miners here are Democrats and wanted to hear her speak, yet did not want to miss Furman's address. Furman courteously agreed to the arrangement.

Mother Jones spoke for about an hour, and it is said by old miners who have heard her in West Virginia and

Pennsylvania, that she does not make as good a speech for Socialism as she does organized labor unions. Nevertheless, she was listened to and liberally applauded by her listeners, particularly when she referred to Furman as the United States senator from Oklahoma, and advised all her adherents to vote for him.

NEGRO GAMBLERS.

Six Big Buck Negroes Spent Night in Calaboose.

Wednesday afternoon Ed Brentz and Jailor M. S. Adams arrested six negroes at the dives below the Compress. They were turned over to the city authorities and were acquitted this morning.

Bryan at Rome.

St. Louis, Mo., Aug. 8.—Homer Bassford, staff correspondent of the St. Louis Republic, tonight cabled his paper as follows: Rome, Aug. 8.—Mr. Bryan and his party did not call on the Pope today, owing to the fact that during Mr. Bryan's previous visit he was received in audience by the Holy Father.

The visitors went to St. Peter's, the Coliseum, the Roman Forum and other points of interest in and about the city. Mr. Bryan left for Milan tonight. He expects to reach Paris by Friday.

OVERDRAFTS

It is becoming well known by business men that overdrafts, whether large or small, are not approved by the controller of the currency. The large central banks allow overdrafts only in a very small way, and this, it matters not how small, is not approved by the powers that be. This unbusinesslike habit of overdrafts grew out of advancing on moving products, such as cotton, grain and fat stock on the move. The overdraft system is wrong and the man whose account is always overdrawn is the man who spends more money than he makes and will finally have no bank account.

16th District's Big DEMOCRATIC RALLY!

The Democracy of the 16th District will rally in Ada

MONDAY, AUGUST 13

The leading orators and United States Senatorial candidates from Oklahoma will address the throng. Hon. Jack Beal of Dallas, Texas, the brilliant Texas Congressman, will be present. A large number of State and Congressional candidates will be the District's guests that day, and will be proud to meet the people. The Democrats of Ada will give a barbecue supper to all the visitors. Between the shoutings and oratory and the feasting there will be music by two of the leading brass bands of the Indian Territory.

The splendid tabernacle constructed by the citizens of Ada, where the exercises will occur, has comfortable seating capacity of nearly 3,000 people.

Monday will be the real opening of the county campaign. Scores upon scores of candidates and prospective candidates for county offices will be on hand, and vigilant. The presence of the Democracy of the 16th district is demanded.

All the Democrats and other good citizens who are seeking after the political truth, or who attach some value to the reliable news capacity of a paper are cordially invited, when in town, to visit the Ada Daily and Weekly News office and plant, situated on the corner of 12th and Broadway, just across from the big tabernacle.

"TURN YE UNTO THE STRONG-HOLD YE PRISONERS OF HOPE"

Wednesday night's service at the tabernacle was an excellent one, notwithstanding the continued dampness kept some away. The preliminary song service was inspiring, particularly so were "Reapers of the Harvest," by the choir, and "Get Right With God," as rendered by Singer Martin. The latter song is the composition of Evangelist Oliver.

"Turn ye unto the stronghold, ye prisoners of hope; even today do I declare that I will render double unto thee," Zach. ix, 12. From this text Mr. Oliver preached a characteristically strong sermon. His sermons are not easily condensed for publication; they come from his tongue already condensed. There's little superfluity to be omitted. Every digression, even, is a nugget and seems to form a vital, inseparable part of the discourse.

The text elaborated last night was a "military text," Mr. Oliver announced. The figure is of a stronghold of the ancients, a fortress set upon an eminence, a place of refuge, of safety from all foes. This is symbolical of the stronghold of God on high.

The awful distinction was drawn between prisoners of hope and prisoners of no hope. A vivid illustration of the latter class was painted: the condemned felon in despair behind the bars with the death warrant upon him. Considering the reclamation of the thief on the cross and of the Saul of Tarsus, the evangelist could not say just when hope for the sinner was gone; nevertheless, there was a day of despair. Also it is "not a matter of accident, but of choice, that one is without hope."

The stronghold is reached only by certain well defined highways. "The greatest of these highways is the Bible." Agnosticism came in for some severe ridicule. "A lightning bug," declared the evangelist, "sheds more light than all the agnostics in the world! A quarrel with the Bible is a quarrel against purity, against honesty, against honor." The audience was urged to search the Scriptures and were warned that they had "better never have heard of the Bible than to have one and not read it."

Another highway to the stronghold is that of prayer. The hour of prayer "is the time of victory of the soul." The necessity for and the sublimity of family prayers was indicated. "There is something wrong with him who does not hold them." The speaker pleaded for the "noble, prayerful home." One must stay intimate with God. Earthly popularity is vanity; "popularity with God is all that counts."

There is the highway of confession. Not only must sin be confessed to God, but also to the person wronged. You cannot evade the "thunderous truth from this old Bible: confess and give up sin!" And "you cannot go just half way. You must not merely, nominally join the church; you must join Jesus Christ." Those who compromise and procrastinate were roundly rebuked. He who purposed to join the church, but not until after the meeting is over, was likened to the patriot who would "join the army after the war is over." The speaker would have "men who come out boldly and let all heaven and earth and hell know where they stand." In the army of God the soldier must enlist, must be formally sworn in.

The grand converging of the highways is in the church. The speaker condemned the conduct of him who affiliates with no particular church, who just drops around occasionally at any or all of them. "He is a religious hobo dropping in here and there for a hand-out." The essential character of the sacred rites, baptism, sacrament, etc., were accentuated.

In conclusion Mr. Oliver pointed to the Savior, the great mediator, ever ready to lead us safely into the stronghold sublime.

Texas Testimony.

Wharton, Texas, May 22, 1905. "Please ship 3 gross Dr. Mendenhall's chill and fever cure as per your quotations. We have been selling your chill cure for 6 years and think it the best chill tonic on the market."—L. B. Outler & Co., druggists. Sold by G. M. Ramsey, druggist.

SUPT. PERKINS RETURNS.

Prepared to Open the Public Schools Sept. 3.

M. L. Perkins, superintendent of Ada's schools, returned Wednesday, after finishing his summer school work in Texas. He came hither directly from Missouri where he has been visiting—or rather he came as directly as the high water would permit. In fact he had quite a strenuous trip, having to make a big detour and being delayed some two days. Mrs. Perkins will arrive next week.

The Superintendent is looking well and resolute for the duties of the approaching scholastic year. The schools will open September 3. With a good corps of fourteen teachers he is determined to make our public schools something to be particularly proud of.

Bryan May Visit Maine.

Washington, Aug. 8.—William J. Bryan is to be importuned upon his arrival in New York a few weeks hence to make a dash up to Maine and deliver one or two speeches in Congressman Littlefield's district. Announcement of this fact was made at the Democratic Congressional Headquarters today.

The Maine elections in September and especially the election in the second district are important forecasts of what may be expected throughout the country in November. If Littlefield be defeated through the aid of the organized labor movement against him, it will furnish inspiration for work elsewhere.

Although the popular subscriptions to the Democratic campaign fund to date total only \$4 a decidedly boastful spirit prevails at the headquarters. It is declared that some surprises are in store for chairman Jim Sherman of the Republican campaign committee, but that in the main quietness is going to be maintained regarding the vulnerable points of attack.

One secret disclosed today, however, was to the effect that the Democrats are counting on carrying five districts in the city of Chicago.

Galveston's Sea Wall

makes life now as safe in that city as on the higher uplands. E. W. Goodloe, who resides on Dutton St., in Waco, Texas, needs no sea wall for safety. He writes: "I have used Dr. King's new discovery for consumption the past 5 years and it keeps me well and safe. Before that time I had a cough which for years had been growing worse. Now it's gone." Cures chronic coughs, la grippe, croup, whooping cough and prevents pneumonia. Pleasant to take. Every bottle guaranteed at G. M. Ramsey's and F. Z. Holley's drug stores. Price 50c and \$1. Trial bottle free.

The End of the World

of troubles that robbed E. H. Wolfe, of Bear Grove, Iowa, of all usefulness came when he began taking Electric bitters. He writes: "Two years ago kidney trouble caused me great suffering, which I never would have survived had I not taken Electric bitters. They also cured me of general debility." Sure cure for all stomach, liver and kidney complaints, blood diseases, headache, dizziness and weakness or bodily decline. Price 50 cents. Guaranteed by G. M. Ramsey's and F. Z. Holley's drug store.

A Mystery Solved.

"How to keep off periodic attacks of biliousness and habitual constipation was a mystery that Dr. King's new life pills solved for me," writes John N. Pleasant, of Magnolia, Ind. The only pills that are guaranteed to give perfect satisfaction to everybody or money refunded. Only 25c at G. M. Ramsey's and F. Z. Holley's drug stores.

Found Dead on the Streets.

A young man was found dead on the streets of Baton Rouge, supposed to have died from a congestive chill, which could have been prevented by the timely use of Dr. Mendenhall's Chill and Fever Cure. Sold by G. M. Ramsey, druggist.

SUGGESTIONS FOR NOVEL AND PLEASING ENTERTAINMENTS.

A Lovely Crystal Wedding the Fortune Guests Would Long Remember—A Most Attractive Summer Luncheon.

A Crystal Wedding.

The "crystal" wedding day comes 15 years after the date of the original ceremony, and is one of the very prettiest of all the anniversaries. The invitations may be written or painted upon sheets of thin, transparent celluloid, which is a very good substitute for glass, inclosing these cards in the regulation cream-colored envelope. It is best to have a reception with hours in the afternoon and evening, if there are to be many guests. The dining room may be made most attractive by keeping everything in white, spreading a canvas on the floor, using glass candlesticks and white candles, with the faintest of white shades. A pretty decoration is to have a large, handsomely ornamented cake in the center of the table, surrounded by 15 candles. Scatter bride roses over the cloth, or white sweet peas.

The tiny glass icicles for Christmas tree decorations are just the thing for an affair of this kind. Suspended from the chandeliers and gas jets, they catch and reflect the light in a most fascinating manner. In serving, glass must be used wherever possible. In Austria coffee is served in glass cups, and so the fashion could be introduced here in an occasion like this. Of course the bon-bons, salted nuts and olives will be in glass receptacles. In place of loaf sugar, substitute rock candy crystals in a cut glass bowl. If the hostess is the owner of any lamps or candlesticks with glass pendants, this is the time to bring them out.

If expense does not have to be considered, the tiny mirrors in metal settings would be charming souvenirs or place cards, the name written on the glass in red ink. A programme of wedding music would be an addition to this reception. As for the gifts to be given, there is an endless variety from which to select. Articles for the desk, toilet and table come in exquisite forms and colorings.

An Informal Luncheon.

"Come to luncheon at one, wear a club suit and bring your thimble." So the little notes read that were received by eight young matrons one day last week. On an awning shaded porch the hostess welcomed her guests, and the maid passed tall tumblers of lemonade, in which three large, luscious cherries floated.

In the dining room, which was all in Delft blue, with blue and white draperies, the table was set with Japanese paper gollies, which come in all sizes and in a bewildering variety of colors. The hostess explained that those gollies were really the cause of the luncheon at this particular time, for everyone knew that she was preparing for an extended trip to the seashore. "I have a scheme to get you girls to help me out of a dilemma, which I'll make known after you have satisfied the inner man and are in a humor to be worked." And what an appetizing spread it was! A mass of scarlet geraniums filled a large copper bowl in the center of the table. Four copper candlesticks, shaded with scarlet, made a soft, beautiful light; the dishes were blue and the service plates of copper. They really belonged to a nut set, but were most effectively used in this way.

The first course was red California cherries dipped in water, then in powdered sugar, and chilled; they were on nasturtium leaves in tall glasses. Creamed chicken and mushrooms in pastry shells, green peas, and Saratoga potatoes came next, with the tiniest of baking powder biscuit. The salad was a fruit mixture, with cheese straws. Delicious cherry ice was the dessert, with lady fingers and macaroons. Iced tea with lemon juice passed in a small glass pitcher was served throughout the meal. A housekeeper will see what an easily prepared repast this was, yet how delicious.

"Now, prepare to work and be worked," said the hostess, and she produced a number of lingerie waists, which were all finished except sewing the lace on collars and sleeves. By five o'clock the last stitch had been taken and a delightful time credited to an already much beloved hostess, who said, in parting: "Many hands make light work."

Form of Introduction.

A young man on being presented to a young woman lifts his hat and bows. The young woman may extend her hand if she feels like doing so, but a smile and a friendly recognition are all that is necessary. You never introduce a girl to a young man, but you do introduce the young man to the girl. Thus: Miss B., may I present Mr. X.? Or: Mr. X., I want to introduce you to Miss B. Yes, you can always say that you are pleased to meet the young lady.

Lavender Lotion.

Borax must be used sparingly as a water-softening agent. It is extremely drying. Quite the most delightful beautifier for the purpose of softening the bathing water is our celebrated lavender lotion. If you use it once you will feel that you must always have it. The formula is most simple: Four ounces of alcohol, one-half ounce of ammonia, one dram of oil of lavender. The alcohol dilutes the ammonia and makes it safe to use, while the lavender gives a most delicious fragrance to the bath.

THE SUMMER GIRL'S DRESS

She Is Fond of Frills and Furbelows—Everything Is Light and Gay in Tone.

The 1906 summer girls will be frocked in frills and furbelows delightfully feminine, writes Helen Berkely-Lloyd in the Delineator for July. From parasol to boot tip, curves dainty touches, and artistic color effects will distinguish everything they wear. Their elders, too, make a generous use of color. They are permitting it to appear in their tweed frockers and motor coats, and their afternoon and dinner gowns of light, silken fabrics, are as often of the new mauve-blue and the warm American Beauty shades as of white or the always charming pastel tints.

The semi-tailored gowns, man-made though they are, emphasize feminine curves in a marked degree, and show the most graceful effects. The bolero is seen on a great many of these gowns, the shorter ones having a ceinture attached that is entirely new.

The sleeves, as a rule, are puffed to the elbow, or half-way to the wrist. They are finished with a velvet-inlaid cuff that flares considerably.

Among the little accessories that the summer girl is wearing are bracelets of black velvet held with jeweled buckles, and wisps of tulle twisted about the upper arm and the wrist, tied in fluffy bows. Arm or glove garters of satin ribbon, shirred over elastic and edged with frills of lace and ribbon are quite new, and as practical as they are ornamental.

NEAT INITIAL LETTERS.

Suitable for Marking House Linen and Have the Advantage of Being Easy to Work.

These letters are for marking house linen, blankets, etc., and may be

CROSS-STITCH INITIAL LETTERS.

worked with ingrain cotton, washing silk or wool, according to the texture of the articles to be marked.

They are easily made, the work goes quickly, the effect is very good.

Witches All Red Headed.

A curious fact in connection with witchcraft is said to be revealed by the old records of trials of accused persons. In each case, according to the Metaphysical Magazine, a lock of the hair of the supposed witch was attached to the documents. A person who has made a special study of these old papers declares that in every instance which has come under his observation the reputed witch must have been red haired.

Artificially aerated drinking waters were the invention of the chemist, Joseph Priestley, who in 1772 published his "Directions for Impregnating Water with Fixed Air in Order to Communicate to It the Peculiar Spirit and Virtues of Pyrmont Water and Other Mineral Waters of a Similar Nature." Some one has calculated the consumption of aerated waters in Great Britain and Ireland to amount to 200,000,000 gallons a year.

A Dry Shampoo.

There is nothing better as a dry shampoo than powdered orris root; it must be in a coarse powder, and the hair dusted well at night; if the brushing is not thorough there is danger of dandruff forming, so that part should be well done.

For Their Good Work.

Dr. E. W. Morley, professor of chemistry, and Dr. George Trumbull Ladd, professor of rhetoric, have been retired with Carnegie pensions from the faculty of the Western Reserve university.

A Bureau Set.

A dainty bureau set, made of white Persian lawn, embroidered in pale blue shadow embroidery, daisies tied with bow knots, was trimmed with a ruffle of lace.

A Bib for Baby.

A pretty bib for the baby of white handkerchief linen, had three squares of lace set at intervals on the edge and trimmed with a ruffle of lace.

A Misnomer.

No wise person ever goes to a confidence man for confidence.

WEIGHT IS NOT ALL

MANY OTHER FACTORS IN DETERMINING BRAIN POWER.

When the Cells Are So Constituted as to Give Ability for "Team Work," High Intelligence Is Present.

Other factors besides brain weight are known to influence intelligence. It has long been known that the distinguishing character of the human brain is the large number of connecting fibers by which its cells are co-ordinated. In no other species are they so numerous or complicated. The cells constitute but a very small part of the weight. There is now considerable evidence that the same rule applies among individual men and that those of great intelligence have more connections, so that their cells can do more and better "team work."

Some investigations have shown the corpus callosum to have a large cross section in men who have shown great ability. It is also known that the brains of able men are likely to present more convulsions and deeper ones than the average, as if there were more brain cells as well as more connections. A few observations in the lower races point to the fact that their brains are essentially different in microscopic organization, partly accounting for less intelligence.

All these facts will fully explain why men of intelligence in the higher races may have brains not notably heavy, but they do not disprove the general statement that as a class men do possess brains heavier than the average.

The mistake arises from the failure to recognize that noted men who have shown intellectual power not infrequently were sharply limited to one or two directions, being very defective in other directions. Blind Tom was an idiot, in fact—an extreme case of what is quite common. At the other extreme was Gambetta, who was not much more than an orator, whose cerebral speech centers were found to be highly developed. The rest of his brain was small, and his general intellectual power and judgment were decidedly defective. Ability in one or two lines may make a man famous, while he is really very defective, and his brain proves to be small.

Heavy brains are not necessarily intellectual ones, or elephants would be in the class of geniuses.

The material might also be pathologic and the possessor an imbecile. It often happens that men of big brain and great ability suffer from early neglect and are found in lowly employments or may remain ignorant through life. These few facts do not prove that large brains are worthless and not indicative of mental power as a rule. We cannot get away from the fact that man as an animal is supreme because of his large brain; that among races the brainiest are the highest, and that in any one race the most intelligent, as a rule, are those who have the most brains.

Men of small brains are not the leaders, and no statistics of the brain weights of a few exceptional men noted for limited abilities can reverse the rule. Universities do not create brains, but merely train what exists, so that the owners are better fitted for the battle of life. Many a man is sent to college who should be handling a pick and shovel, and he never amounts to much, even though he subsequently makes his living at some very limited specialty.

Girls, Wear White!

Frau Liebreich, a wealthy resident of Munich, is convinced that girls who wear white dresses get married sooner than girls who wear all sorts of colors. Accordingly, she has organized a "league of white women" among her friends, the members of which undertake to wear pure white for all important and ceremonial functions. In her address to the first members of the guild—some 20 fair maids of Munich—Frau Liebreich is reported to have said: "I loved my husband before he loved me, and he returned my affection only when he saw me accidentally in a white dressing gown. White is a symbol of pure love and thus appeals to the better half of the male creation. The plainest girl dressed in white will conquer hearts more rapidly than a beauty who stoops to the meretricious attractions of a hundred hues."

Millhand to Millionaire.

J. R. Booth, the Canadian railway magnate and lumber king, began life as a millhand. Now he possesses 6,000 square miles of timber land and is the largest owner in his own right of railways in British North America. As he drives about Ottawa in an old-fashioned buggy and simply dressed he would be taken for a comfortable farmer rather than a prince of industry. However, the close observer cannot fail to look a second time at the forceful, self-reliant and energetic countenance which looks out from under the soft felt hat.

Settled a Pretender.

The late Carl Schurz had no consideration for hypocrites or pretenders. Upon literary pretenders he was particularly severe. At a dinner in New York one night a millionaire who had written a volume of poems sneered at politics. "I wouldn't give a picayune," he said, "for a senatorship or a cabinet office. To be even president wouldn't tempt me. I, for my part, would rather be known any day as a third-rate poet than a first-rate statesman." "Well, aren't you?" shouted Mr. Schurz.

DECAY OF IMAGINATION.

Assertion Made That Civilization Is Not Only Killing Poetry, But Sense of Humor.

An Italian scientist thinks that civilization is not only killing poetry, but the sense of humor. Both depends upon the seen object suggesting other things to the mind, in one case congruous, in the other incongruous. Science has made our minds more rigid so that we see only what we see. "More rigid" means less vitalized.

Under new conditions at hand, we shall get back our vitality, shall once more have some to spare, once more be able to see the naked visible in its proper robes. Imagination is the seeing of real relations. It is seeing what we feel ought to be, which, when sane, is a deeper seeing of what they are. Humor is imagination relaxing herself and playing the caricaturist. While she lives at all, she must be permitted to recreate. She thrives on the surplus age of mental vitality.

Nordau dwells somewhere on the tendency of artists he calls degenerate to paint everything more or less violet. One would suppose that every color, like every sound, must be yielding its overtones. Any one can see the color as it stands. It takes an artist to see—feel, "imagine"—its overtones and bring them down for us.—Student in the New Century.

INFERENCE WAS GOOD.

Dull Pupil Amazed Teacher by Giving Proof of Average Reasoning Power.

A Baltimore school-teacher was telling one day of how often the instructor of "the young idea" is astonished by the quickness of wit exhibited by the pupil who is otherwise deficient.

One day, says this teacher, she had encountered such a degree of ignorance and mental obtuseness on the part of one of her boys that she became disheartened. So it was with considerable sarcasm that she said to the youngster:

"I wonder if you could tell me whether George Washington was a soldier or a sailor."

The kid grinned. "He was a soldier, all right," was his reply.

"How do you know?" asked the weary teacher.

"Because I seen a picture of him crossin' the Delaware," explained the boy. "Any sailor'd know enough not to stand up in a boat."

HARVARD MAN'S GRACE.

Familiarity of Petition Shocked Arizona Men Gathered for Thanksgiving Dinner.

A story is told about a young fellow just out of Harvard, who went to Arizona to find out what it was like. He was affected in his manner, after the English fashion, and around the neighborhood soon became something of a joke.

When Thanksgiving came, all the men without homes dined together, and before the feast it was arranged that the Harvard youth should be asked to say grace. The boys wanted to find out what sort of training he had received. When the gentleman at the head of the table requested the favor of him, he hesitated a moment, smiled weakly and lisped:

"Ouh Fatheh!" with uplifted finger, and then "Jolly good lunch; thanks awfully, old chap."

Putting Her Foot in It.

Two girl friends met in the street and stopped to shake hands.

"So glad to see you, Grace," said the tailor-made Alice. "Was just on my way to ask you, as my oldest friend, to be one of my bridesmaids."

"Bridesmaids! How lovely! I did not know you were engaged," replied Grace.

"It's sudden, very sudden, but he's awfully in love, and is just too sweet to live. Will you act?"

"Act? Of course. I'll be charmed. But," moving forward and speaking in an undertone, "do come round the corner and tell me all about it. There comes that idiotic, irrepressible donkey, Jim Berton. He's grinning as though he meant to stop, and I don't care to be seen talking to him."

"Jim Berton? He's the man I'm going to marry!"

Cause for Celebration.

Bishop Talbot of central Pennsylvania is fond of relating amusing experiences while a missionary in the west. On one occasion he arrived at a mountain town and entered the hotel dining room, taking a seat. A resident who had been drinking fell into conversation with him. "I'm glad you've come here," said the man, "for the boys need somebody to give them advice. They drink a heap. I'll you." The bishop said: "I am sorry to hear that, my friend, but if you will pardon me, it seems as though you are troubled that way yourself." The mountaineer saw the point, but rejoined quickly: "Well, ye see, when the bishop comes a feller just has to celebrate some."

Foolish English "Smart" Set.

An American who has just returned from London expresses surprise mingled with disgust regarding the talk he heard among "smart" people there. For absolute silliness it was far ahead of anything he had ever heard. It is considered quite the thing to abbreviate words. He heard a grown woman say to a friend: "Isn't it terry to have neury on such a divey day?" Translated into English that means: "Isn't it terrible to have neuralgia on such a divine day?"

"GRAND OLD NAME"

"GEORGE" A PATRONYMIC HONORED AND REVERED.

Mr. Ade, Successful Author and Humorist, Gives Many Reasons Why This Should Be So—Historical "Facts."

To the anniversary number of his friend, George M. Cohan's cheerfully carzy press sheet, "The Spot Light," George Ade contributes some reflections on the name George, the sum of his argument being that it's a grand old name for actor, author, manager or agent.

Have you ever figured out why people who wish to be emphatic say, "By George?" To swear by the Deity would be profane. To swear by Oscar or Herbert or Randolph would mean nothing. "George" has been adopted as the most important and awe-inspiring name that can be borrowed from the ordinary human list.

From the original St. George, patron saint of England, who is shown in his favorite lithograph to be fighting the syndicate, down to George Wilkes, the great trotting stallion, the name of "George" has always been the trademark of a live one. Every good Pullman porter is named George. If, when alighting at a one-night stand, you insist upon being hauled by "George," you will invariably get an upholstered hack, with the blanket neatly folded, and not as much hay as you might expect.

George III. would have won if he had not given away so much weight in meeting the other George, adopted stepfather of George Washington, Jr. George is from the Greek, meaning "husbandman" or "farmer." "My parents were in right, but how about George Marion, George Beane, George Nash, George Considine and George Caine?"

When you begin to count them, it is wonderful how the Georges loom up. There has been one George Francis Train in the last century, and George Alexander is to the English stage what George Dixon was to another department of art in this country.

When a woman wants to write under a man's name, she hurries to get in with the real Georges. Take the three greatest—George Eliot, George Sands and George Fleming.

Some people ask: "What's in a name?" Answer—"Everything." Can you see the Chicago public fighting to get into a show-shop to see a piece written by Egbert M. Cohan? And if my name had been Wilfred Ade, would I have been invited to write for the Spot Light? Suppose that George Bernard Shaw had been christened Sam Bernard Shaw, would "Man and Superman" have run all winter in New York? Think it over.

There's no use talking. "It's a grand old name."

Too Big a Field.

Years ago, while Reverend Shandaloupe was a student at the seminary, he undertook, one vacation season, to sell fire extinguishers.

His pleasing address and affability enabled him to make many sales. However, he encountered the usual rebuffs, which are the experience of all agents.

The theological student had gained access to the office of a surly broker, and forthwith began expatiating on the deluging powers of his incomparable fire extinguisher.

"To hell with it!" roared the broker, flenchily.

"Oh, my dear man," expostulated Shandaloupe, "this extinguisher does not deserve the extreme virtue with which you credit it."—Harper's Weekly.

The Pope's Wardrobe.

The outward robe of the pope is red and made from the wool of the lambs of the convent of St. Agnes, near the Porta Pia. The cloak and cape are lined with purple and trimmed with gold lace; the sombrero, or hat, is red and has a gold cord and tassel. Beneath the cloak is worn an alb, made also of wool of the lambs of St. Agnes, and girt about the waist with a sash of white moire antique, garnished with gold fringe. The pope's hands and feet are covered with kid mittens and his feet are burdened with a pair of slippers worn over his ordinary shoes. The total value of his wardrobe is said to be \$150,000.

Where Titles Mean Much.

The question of title is one of the most delicate in Germany, a fact of which the stranger is constantly reminded in intercourse with the people, particularly with the women. Frau Professor, Frau Director, Frau Doctor are most particular about their husband's titles when attached to their own names. But when it comes to military circles it is different, and both men and women protest vigorously against this sharing of titles. Lieut. von B— objects to having his wife addressed as Frau Lieutenant, which title belongs as well to the wife of Lieut. Schmidt or Haaf of a less aristocratic regiment.

Knew of One or Two.

"Is there any available substitute for rubber?" asked the instructor of the class.

"Yes, sir," answered Miss de Muir, one of the fair coeds. "I think 'stare' or 'gape' is just as good."

Reward of Merit.

Engine drivers in Germany receive a sum of money and a gold watch for every ten years served without an accident.

THE GAME OF CLOCK GOLF

Good-Sized Lawn Is Big Enough, and Anyone Can Prepare Ground for Playing.

No doubt some of our boys and girls are expert golfers, but most of them have no opportunity to play the game because one must have regular links, and they are few and far between, owing to the great stretches of ground they must cover. However, you can all play clock golf, and get nearly as much fun out of it as others do from the more pretentious game.

Your own lawn, or a neighbor's, will afford ample room. You need but one stick, a "putter," which you can buy for one dollar, or you can easily make one just as you make a "shinny" stick in the winter, or, better still, your old hockey club will be found just the thing.

Get 12 pieces of cardboard about four inches square and number them from one to 12. Then get some heavy wires or slender sticks, sharpened on one end, and glue one of the cardboards to each. Get a larger cardboard, mark it center, fasten it to another stick and place it in the center of the plot of ground you are going to use. By this center post dig a hole deep and wide enough to contain a tin can without a top. Sink the can in the hole so that its rim is just level with the ground. Stick the other numbered cardboards in an uneven circle about the center and, making your circle as large as your ground will permit, build a little "tee" or pile of earth by each number.

PLAYING CLOCK GOLF.

and you are ready to play. Your ball should be the regulation golf ball.

Place the ball on the tee by No. 1, and try to drive it into the hole in the center with one stroke. It is not at all likely that you will, but it will probably take you four or five. Then mark on a card the number of strokes you had to use, and go to the second tee, and so on until you have gone "all around the clock."

Place the ball on the tee by No. 1, and try to drive it into the hole in the center with one stroke. It is not at all likely that you will, but it will probably take you four or five. Then mark on a card the number of strokes you had to use, and go to the second tee, and so on until you have gone "all around the clock."

After a little practice, says Good Literature, you will be making almost every hole in two strokes, but it will be a long time before you can do it in "bogie," or the least number of strokes possible to the ordinary player. Some very fine players beat "bogie," which is usually placed at one stroke for every other hole, or "around the clock" in eighteen strokes. You will improve your game almost every time you play, and you will find "clock golf" the best sort of practice for real golf. Clock golf is not to be despised by any means for lots of golf professionals play it a great deal, as it is the finest kind of training in putting.

FLYING-FISH.

Queer Creatures of the Sea Which Have Occupied the Attention of Scientists.

Flying-fish must have been watched ever since the first mariners ventured upon the sea, and yet the question of the manner in which they perform their flights is apparently unsettled. Dr. Abel, of the Austrian geological

survey, in a recent memoir on these fishes, maintains that the initial impetus by means of which they launch themselves is due to screw-like movements of the tail fin, and that the wings are in no sense propelling organs, but act simply as parachutes. On the other hand, says the Youth's Companion, it is maintained by other observers that the flight of flying-fishes is due to incessant and extremely rapid movements of their wing-like fins. It has been suggested that there may be differences in the manner of flight of different species of fish, and that consequently there may be truth in both views.

Taken at His Word.

A young motorist was endeavoring to convince a country innkeeper that the decay of coaching was more compensated by the spread of motoring as a pastime, says a writer in the St. James' Gazette. As a final argument, he stated that his car was of 40 horsepower, "the equal, sir, of ten relays of coach horses."

The next morning he read in his bill: "To feeding and stabling, 80 shillings." He asked the landlord for an explanation.

"The charge for 'osses, sir, is two shillings a head, sir," was the reply. "And I've your word, sir, that that machine is the same as 40 'orses, sir, so it comes to 80 shillings."

WEATHER FORECAST:

Continued showers tonight and Wednesday.

THE EVENING NEWS.

TEMPERATURE TODAY:

At 3 p. m., 87 degrees.

DEVOTED TO MAKING ADA A LARGER AND MORE PROGRESSIVE CITY

VOLUME 3

ADA, INDIAN TERRITORY, THURSDAY EVENING, AUGUST 9, 1906

NUMBER 119

MORE WATER! ADA THE COMING FACTORY TOWN MUST HAVE IT

Oceans of water! That's what Ada wants now. One might think this a curious cry right at this time of deluges. But the fact is a colossal enterprise is knocking at our doors, and all it requires of us is a big water supply the year around.

There have been indefinite rumors for some weeks of a big cement plant being established here by Northern capitalists, but nothing of a definite nature was made public, all of which verifies the old proverb "that still water runs deep." The enterprise has materialized far enough now to warrant publicity. There arrived in Ada Wednesday from the East the following capitalists: A. L. Beck and C. C. Bishop, of Chicago; Wm. L. Whitaker and J. H. Edwards, of Mitchell, Ind., and J. M. Wintersmith, of Louisville. Last night they held a meeting and organized a corporation to be known as the Oklahoma Portland Cement Company. The incorporation will be perfected under the laws of the territory as soon as the papers can reach South McAlester for filing. The company is capitalized at \$300,000, all paid up, the majority of the stock being taken by the incorporators, who are the gentlemen above mentioned, together with A. T. Howe,

of Chicago; Peter Martin, of Huntington, Ind., and Geo. L. Kice, of Mitchell, Ind. The official roster of the company is as follows: A. L. Beck, president, C. C. Bishop, vice-president; J. M. Wintersmith, secretary-treasurer; Wm. L. Whitaker, general manager; the board of directors are: Beck, Wintersmith, Bishop, Martin and Kice. All of the stock is owned by non-residents and none is for sale.

Tersely stated, the purpose of the corporation is to manufacture cement, and on a big scale. Be it said in passing, this company has no connection with the Oklahoma City concern mentioned in a dispatch from that place a few days ago. In connection therewith one or more of these gentlemen's names were used, but entirely without authority. The company organized here owns 200 acres on the Frisco six miles south of Ada, acquired some time ago by Mr. Beck. The tract contains inexhaustible stores of limestone and cement shale. The plant for the manufacture of this raw product requires an enormous volume of water. If a sufficient supply of water is not forthcoming at Ada, the plant will be located somewhere on a big, reliable stream.

The amount of \$300,000 is to be the initial outlay for building and equipping the plant. From this one may get some idea of its magnitude: The main building will be 300x600 feet; the machinery will include one engine of 750 horse power, two of 150 each, two of 75 each, and two of 15 horse power each. Operations will begin with an output capacity of 1,500 barrels per day, though shafting will be installed with a capacity looking to an eventual output of 3,000 barrels. To begin with the payroll will be as much as \$300 per day. The ground necessary for the plant will be about 30 acres, which land the city of Ada will be expected to donate.

Now, as to the water question—and there's the rub. For the output of 1,500 barrels of cement 1,500 gallons of water must be utilized every minute, or 2,160,000 gallons every 24 hours. The cement men today have been making a thorough inspection of the city's present supply. They find upon test that the city pump at its utmost capacity pumps only 156 gallons a minute, although it was bought to have a capacity of 500 gallons. Pumping thus for 2 hours the big city well was lowered 8 feet. Ada has always had a

bountiful supply of water for all domestic and business purposes, besides furnishing water for railroad engines, yet how insignificant looks the present well supply when one contemplates watering so thirsty a thing as this big cement plant. But the water must be forthcoming if we get the works. True, only about 12 per cent of the water would be necessarily lost. The remainder, after condensation from steam, could be run back and used again; but in such case it would have to go through a cooling process, and, containing much cylinder oil, it could not be mingled with the city supply.

These business visitors are practical men, know their business thoroughly. They are not begging for anything—want nothing as a gift. If they build at Ada their switching expenses from the source of supply would be enormous. They could locate on a good stream somewhere and the water would cost nothing; so they figure that Ada should and must furnish the water supply to compensate them for hauling the raw material from the quarry. Ada can't afford to miss this thing, even though it should suck every well in the county dry. We've either got to dig deep or dam high.

LATEST NEWS FROM FLOODED DISTRICTS

Oklahoma City, Ok., Aug. 8.—Rain bordering on cloudbursts has been falling at Oklahoma City and various portions of the two territories at intervals since Sunday afternoon, resulting in congested railroad traffic, damage to crops, flooded streets and basements, and overflowing streams. The damage will result in a loss of several thousand dollars.

The Atchison, Topeka & Santa Fe, Rock Island, Missouri, Kansas & Texas and Frisco railways out of this city report loss of bridges, inundated roadbed and numerous washouts.

From Purcell comes reports of numerous washouts and 200 feet of track under water.

At Lexington, Ok., just across the river from Purcell, Shoto creek is reported a half a mile wide, washing out the Santa Fe track to such an extent that it is necessary to detour trains via the Frisco from this city to Chickasha and thence to Ft. Worth, Texas, and Dallas over the Rock Island.

The Missouri, Kansas & Texas is enabled to operate trains from here to Kansas City, but on the Shawnee division all traffic is at a standstill on account of the loss of bridges, coupled with some fifteen track washouts.

No trains are running on the Rock Island between this city and South McAlester, the track in some places being

under 4 feet of water.

Reports from many Oklahoma and Indian Territory flooded districts today indicate increased damage to crops and railways due to swollen streams, which are rising at a remarkable rate. No loss of life is reported, but considerable stock has been drowned.

SUPERINTENDENT WALKS.

W. E. Brown Takes a Tie Ticket from Konawa to Ada.

Muddy from head to foot, all haggard and torn, with a weary, melancholy expression upon his face, W. E. Brown, division superintendent of the M. & T., came strolling in today from Konawa. It was his duty to see the road, and he inspected it at the expense of a several hours' walk. We move a \$100 raise in salary, or promotion to the presidency of the road.

Rev. Sam Jones Dead.

Sulphur, I. T., Aug. 8.—Rev. Sam Jones, pastor of the Vinita Avenue Methodist church of this city, died last night at 10:30. He had been sick only since Thursday night.

J. P. Eddleman returned from Texas after a two months' visit there. He was accompanied by Miss Erma Thomson who will visit the Eddleman family.

OUR HENRY M. FURMAN AT WILBURTON IND. TERRITORY

Wilburton, I. T., Aug. 8.—The greatest political rally ever held in this district was held in the opera house under the auspices of the Jefferson Democratic club of Wilburton. The meeting was a representative one of the district, composed largely of members of the trades unions. Much interest was taken from the fact that the meeting was addressed by two of the ablest speakers ever in this part of the territory. The Democrats were represented by Henry M. Furman, who spoke for two hours to an enthusiastic and appreciative audience, and he was applauded to the echo, though no mention was made by him of his candidacy for the United States senate. His remarks were confined mostly to the necessary measures to come before the constitutional convention that are being advocated by the labor unions. He was followed by Mother Jones, whose date conflicted with his and who had no hall in which to speak, therefore the Democratic and Socialist committees agreed to divide the time with her. As many of the miners here are Democrats and wanted to hear her speak, yet did not want to miss Furman's address, Furman courteously agreed to the arrangement.

Mother Jones spoke for about an hour, and it is said by old miners who have heard her in West Virginia and

Pennsylvania, that she does not make as good a speech for Socialism as she does organized labor unions. Nevertheless, she was listened to and liberally applauded by her listeners, particularly when she referred to Furman as the United States senator from Oklahoma, and advised all her adherents to vote for him.

NEGRO GAMBLERS.

Six Big Buck Negroes Spent Night in Calaboose.

Wednesday afternoon Ed Brentz and Jailor M. S. Adams arrested six negroes at the dives below the Compress. They were turned over to the city authorities and were acquitted this morning.

Bryan at Rome.

St. Louis, Mo., Aug. 8.—Homer Bassford, staff correspondent of the St. Louis Republic, tonight cabled his paper as follows: Rome, Aug. 8.—Mr. Bryan and his party did not call on the Pope today, owing to the fact that during Mr. Bryan's previous visit he was received in audience by the Holy Father.

The visitors went to St. Peter's, the Coliseum, the Roman Forum and other points of interest in and about the city.

Mr. Bryan left for Milan tonight. He expects to reach Paris by Friday.

YOUR DOCTOR

is a man you have confidence in. Why is it he shows a preference to have his prescriptions filled at our drug store. It's because CAREIN FILLING PRESCRIPTIONS and pure, fresh drugs has convinced him of our reliability. This assurance doesn't cost anything. Our prescriptions cost no more than others. Get them and be safe.

OVERDRAFTS

It is becoming well known by business men that overdrafts, whether large or small, are not approved by the comptroller of the currency. The large central banks allow overdrafts only in a very small way, and this, it matters not how small, is not approved by the powers that be. This unbusinesslike habit of overdrafts grew out of advancing on moving products, such as cotton, grain and fat stock on the move. The overdraft system is wrong and the man whose account is always overdrawn is the man who spends more money than he makes and will finally have no bank account.

TWO VIEWS OF ADA GAS AND ELECTRIC CO'S PLANT

16th District's Big DEMOCRATIC RALLY!

The Democracy of the 16th District will rally in Ada

MONDAY, AUGUST 13

The leading orators and United States Senatorial candidates from Oklahoma will address the throng. Hon. Jack Beal of Dallas, Texas, the brilliant Texas Congressman, will be present. A large number of State and Congressional candidates will be the District's guests that day, and will be proud to meet the people. The Democrats of Ada will give a barbecue supper to all the visitors. Between the shoutings and oratory and the feasting there will be music by two of the leading brass bands of the Indian Territory.

The splendid tabernacle constructed by the citizens of Ada, where the exercises will occur, has comfortable seating capacity of nearly 3,000 people.

Monday will be the real opening of the county campaign. Scores upon scores of candidates and prospective candidates for county offices will be on hand, and vigilant. The presence of the Democracy of the 16th district is demanded.

All the Democrats and other good citizens who are seeking after the political truth, or who attach some value to the reliable news capacity of a paper are cordially invited, when in town, to visit the Ada Daily and Weekly News office and plant, situated on the corner of 12th and Broadway, just across from the big tabernacle.

DO NOT FAIL TO ATTEND

OTIS B. WEAVER, PUBLISHER
A. D. STEINER, BUSINESS MGR.

Entered as second-class mail matter March 25, 1913, at the post office at Ada, Indian Territory under the Act of Congress March 3, 1879.

TURN YE UNTO THE STRONG-HOLD YE PRISONERS OF HOPE

Wednesday night's service at the tabernacle was an excellent one, notwithstanding the continued dampness kept some away. The preliminary song service was inspiring, particularly so were "Reapers of the Harvest," by the choir, and "Get Right With God," as rendered by Singer Martin. The latter song is the composition of Evangelist Oliver.

"Turn ye unto the stronghold, ye prisoners of hope; even today do I declare that I will render double unto thee," Zach. ix, 12. From this text Mr. Oliver preached a characteristically strong sermon. His sermons are not easily condensed for publication; they come from his tongue already condensed. There's little superfluity to be omitted. Every digression, even, is a nugget and seems to form a vital, inseparable part of the discourse.

The text elaborated last night was a "military text," Mr. Oliver announced. The figure is of a stronghold of the ancients, a fortress set upon an eminence, a place of refuge, of safety from all foes. This is symbolical of the stronghold of God on high.

The awful distinction was drawn between prisoners of hope and prisoners of no hope. A vivid illustration of the latter class was painted: the condemned felon in despair behind the bars with the death warrant upon him. Considering the reclamation of the thief on the cross and of the Saul of Tarsus, the evangelist could not say just when hope for the sinner was gone; nevertheless, there was a day of despair. Also it is "not a matter of accident, but of choice, that one is without hope."

The stronghold is reached only by certain well defined highways. "The greatest of these highways is the Bible." Agnosticism came in for some severe ridicule. "A lightning bug," declared the evangelist, "sheds more light than all the agnostics in the world! A quarrel with the Bible is a quarrel against parity, against honesty, against honor." The audience was urged to search the Scriptures and were warned that they had "better never have heard of the Bible than to have one and not read it."

Another highway to the stronghold is that of prayer. The hour of prayer "is the time of victory of the soul." The necessity for and the sublimity of family prayers was indicated. "There is something wrong with him who does not hold them." The speaker pleaded for the "noble, prayerful home." One must stay intimate with God. Earthly popularity is vanity; "popularity with God is all that counts."

There is the highway of confession. Not only must sin be confessed to God, but also to the person wronged. You cannot evade the "thunderous truth from this old Bible; confess and give up sin!" And "you cannot go just half way. You must not merely, nominally join the church; you must join Jesus Christ." Those who compromise and procrastinate were roundly rebuked. He who purposed to join the church, but not until after the meeting is over, was likened to the patriot who would "join the army after the war is over." The speaker would have "men who come out boldly and let all heaven and earth and hell know where they stand." In the army of God the soldier must enlist, must be formally sworn in.

The grand converging of the highways is in the church. The speaker condemned the conduct of him who affiliates with no particular church, who just drops around occasionally at any or all of them. "He is a religious hobo dropping in here and there for a hand-out." The essential character of the sacred rites, baptism, sacrament, etc., were accentuated.

In conclusion Mr. Oliver pointed to the Savior, the great mediator, ever ready to lead us safely into the stronghold sublime.

Texas Testimony.

Wharton, Texas, May 22, 1905. "Please ship 3 gross Dr. Mendenhall's Chill and Fever Cure as per your quotations. We have been selling your Chill Cure for 6 years and think it the best Chill tonic on the market." L. B. Outler & Co., druggists. Sold by G. M. Ramsey, druggist.

SUPT. PERKINS RETURNS.

Prepared to Open the Public Schools Sept. 3.

M. L. Perkins, superintendent of Ada's schools, returned Wednesday, after finishing his summer school work in Texas. He came hither directly from Missouri where he has been visiting—or rather he came as directly as the high water would permit. In fact he had quite a strenuous trip, having to make a big detour and being delayed some two days. Mrs. Perkins will arrive next week.

The Superintendent is looking well and resolute for the duties of the approaching scholastic year. The schools will open September 3. With a good corps of fourteen teachers he is determined to make our public schools something to be particularly proud of.

Bryan May Visit Maine.

Washington, Aug. 8.—William J. Bryan is to be importuned upon his arrival in New York a few weeks hence to make a dash up to Maine and deliver one or two speeches in Congressman Littlefield's district. Announcement of this fact was made at the Democratic Congressional Headquarters today.

The Maine elections in September and especially the election in the second district are important forecasts of what may be expected throughout the country in November. If Littlefield be defeated through the aid of the organized labor movement against him, it will furnish inspiration for work elsewhere.

Although the popular subscriptions to the Democratic campaign fund to date total only \$4 a decidedly boastful spirit prevails at the headquarters. It is declared that some surprises are in store for chairman Jim Sherman of the Republican campaign committee, but that in the main quietness is going to be maintained regarding the vulnerable points of attack.

One secret disclosed today, however, was to the effect that the Democrats are counting on carrying five districts in the city of Chicago.

Galveston's Sea Wall

makes life now as safe in that city as on the higher uplands. E. W. Goodloe, who resides on Dutton St., in Waco, Texas, needs no sea wall for safety. He writes: "I have used Dr. King's new discovery for consumption the past 5 years and it keeps me well and safe. Before that time I had a cough which for years had been growing worse. Now it's gone." Cures chronic coughs, in gripe, croup, whooping cough and prevents pneumonia. Pleasant to take. Every bottle guaranteed at G. M. Ramsey's and F. Z. Holley's drug stores. Price 50c and \$1. Trial bottle free.

The End of the World

of troubles that robbed E. H. Wolfe, of Bear Grove, Iowa, of all usefulness came when he began taking Electric Bitters. He writes: "Two years ago kidney trouble caused me great suffering, which I never would have survived had I not taken Electric Bitters. They also cured me of general debility." Sure cure for all stomach, liver and kidney complaints, blood diseases, headache, dizziness and weakness or bodily decline. Price 50 cents. Guaranteed by G. M. Ramsey's and F. Z. Holley's drug store.

A Mystery Solved

"How to keep off periodic attacks of biliousness and habitual constipation was a mystery that Dr. King's new life pills solved for me," writes John N. Pleasant, of Magnolia, Ind. The only pills that are guaranteed to give perfect satisfaction to everybody or money refunded. Only 25c at G. M. Ramsey's and F. Z. Holley's drug stores.

Found Dead on the Streets.

A young man was found dead on the streets of Baton Rouge, supposed to have died from a congestive chill, which could have been prevented by the timely use of Dr. Mendenhall's Chill and Fever Cure. Sold by G. M. Ramsey, druggist.

RECREATION HOURS

SUGGESTIONS FOR NOVEL AND PLEASING ENTERTAINMENTS.

A Lovely Crystal Wedding the Fortunate Guests Would Long Remember—A Most Attractive Summer Luncheon.

A Crystal Wedding.

The "crystal" wedding day comes 15 years after the date of the original ceremony, and is one of the very prettiest of all the anniversaries. The invitations may be written or painted upon sheets of thin, transparent celluloid, which is a very good substitute for glass, inclosing these cards in the regulation cream-colored envelope. It is best to have a reception with hours in the afternoon and evening, if there are to be many guests. The dining room may be made most attractive by keeping everything in white, spreading a canvas on the floor, using glass candlesticks and white candles, with the faintest of white shades. A pretty decoration is to have a large, handsomely ornamented cake in the center of the table, surrounded by 15 candles. Scatter bride roses over the cloth, or white sweet peas.

The tiny glass icicles for Christmas tree decorations are just the thing for an affair of this kind. Suspended from the chandeliers and gas jets, they catch and reflect the light in a most fascinating manner. In serving, glass must be used wherever possible. In Austria coffee is served in glass cups, and so the fashion could be introduced here on an occasion like this. Of course the bou-bons, salted nuts and olives will be in glass receptacles. In place of loaf sugar, substitute rock candy crystals in a cut glass bowl. If the hostess is the owner of any lamps or candlesticks with glass pendants, this is the time to bring them out.

If expense does not have to be considered, the tiny mirrors in metal settings would be charming souvenirs or place cards, the name written on the glass in red ink. A programme of wedding music would be an addition to this reception. As for the gifts to be given, there is an endless variety from which to select. Articles for the desk, toilet and table come in exquisite forms and colorings.

An Informal Luncheon.

"Come to luncheon at one, wear a tub suit and bring your thimble." So the little notes read that were received by eight young matrons one day last week. On an awning shaded porch the hostess welcomed her guests, and the maid passed tall tumblers of lemonade, in which three large, luscious cherries floated.

In the dining room, which was all in Delft blue, with blue and white draperies, the table was set with Japanese paper dollies, which come in all sizes and in a bewildering variety of colors. The hostess explained that those dollies were really the cause of the luncheon at this particular time, for everyone knew that she was preparing for an extended trip to the seashore. "I have a scheme to get you girls to help me out of a dilemma, which I'll make known after you have satisfied the inner man and are in a humor to be worked." And what an appetizing spread it was! A mass of scarlet geraniums filled a large copper bowl in the center of the table. Four copper candlesticks, shaded with scarlet, made a soft, beautiful light, the dishes were blue and the service plates of copper. They really belonged to a nut set, but were most effectively used in this way.

The first course was red California cherries dipped in water, then in powdered sugar, and chilled; they were on nasturtium leaves in tall glasses. Creamed chicken and mushrooms in pastry shells, green peas, and Saratoga potatoes came next, with the tiniest of baking powder biscuit. The salad was a fruit mixture, with cheese straws. Delicious cherry ice was the dessert, with lady fingers and macaroons. Iced tea with lemon juice passed in a small glass pitcher was served throughout the meal. A housekeeper will see what an easily prepared repast this was, yet how delicious.

"Now, prepare to work and be worked," said the hostess, and she produced a number of lingerie waists, which were all finished except sewing the lace on collars and sleeves. By five o'clock the last stitch had been taken and a delightful time credited to an already much beloved hostess, who said, in parting: "Many hands make light work."

Form of Introduction.

A young man on being presented to a young woman lifts his hat and bows. The young woman may extend her hand if she feels like doing so, but a smile and a friendly recognition are all that is necessary. You never introduce a girl to a young man, but you do introduce the young man to the girl. Thus: Miss B., may I present Mr. X? Or: Mr. X., I want to introduce you to Miss B. Yes, you can always say that you are pleased to meet the young lady.

Lavender Lotion.

Borax must be used sparingly as a water-softening agent. It is extremely drying. Quite the most delightful beautifier for the purpose of softening the bathing water is our celebrated lavender lotion. If you use it once you will feel that you must always have it. The formula is most simple: Four ounces of alcohol, one-half ounce of ammonia, one dram of oil of lavender. The alcohol dilutes the ammonia and makes it safe to use, while the lavender gives a most delicious fragrance to the bath.

THE SUMMER GIRL'S DRESS

She Is Fond of Frills and Furbelows—Everything Is Light and Gay in Tone.

The 1906 summer girls will be frocked in frills and furbelows delightfully feminine, writes Helen Berkely-Lloyd in the Delineator for July. From parasol to boot tip, curves dainty touches, and artistic color effects will distinguish everything they wear. Their elders, too, make a generous use of color. They are permitting it to appear in their tweed frock coats and motor coats, and their afternoon and dinner gowns of light, silken fabrics, are as often of the new mauve-blue and the warm American Beauty shades as of white or the always charming pastel tints.

The semi-tailored gowns, man-made though they are, emphasize feminine curves in a marked degree, and show the most graceful effects. The bolero is seen on a great many of these gowns, the shorter ones having a ceinture attached that is entirely new.

The sleeves, as a rule, are puffed at the elbow, or half-way to the wrist. They are finished with a velvet-inlaid cuff that flares considerably. Among the little accessories that the summer girl is wearing are bracelets of black velvet held with jeweled buckles, and wisps of tulle twisted about the upper arm and the wrist, tied in fluffy bows. Arm or glove garters of satin ribbon, shirred over elastic and edged with frills of lace and ribbon are quite new, and as practical as they are ornamental.

NEAT INITIAL LETTERS.

Suitable for Marking House Linen and Have the Advantage of Being Easy to Work.

These letters are for marking house linen, blankets, etc., and may be

CROSS-STITCH INITIAL LETTERS.

worked with Ingrain cotton, washing silk or wool, according to the texture of the articles to be marked.

They are easily made, the work goes quickly, the effect is very good.

Witches All Red Headed.

A curious fact in connection with witchcraft is said to be revealed by the old records of trials of accused persons. In each case, according to the Metaphysical Magazine, a lock of the hair of the supposed witch was attached to the documents. A person who has made a special study of these old papers declares that in every instance which has come under his observation the reputed witch must have been red haired.

Artificially aerated drinking waters were the invention of the chemist, Joseph Priestley, who in 1772 published his "Directions for Impregnating Water with Fixed Air in Order to Communicate to It the Peculiar Spirit and Virtues of Pyrmont Water and Other Mineral Waters of a Similar Nature." Some one has calculated the consumption of aerated waters in Great Britain and Ireland to amount to 200,000,000 gallons a year.

A Dry Shampoo.

There is nothing better as a dry shampoo than powdered orris root, it must be in a coarse powder, and the hair dusted well at night, if the brushing is not thorough, so that part should be well done.

For Their Good Work.

Dr. E. W. Morley, professor of chemistry, and Dr. George Trumbull Ladd, professor of rhetoric, have been retired with Carnegie pensions from the faculty of the Western Reserve university.

A Bureau Set.

A dainty bureau set, made of white Persian lawn, embroidered in pale blue shadow embroidery, daisies tied with bow knots, was trimmed with a ruffle of lace.

A Bib for Baby.

A pretty bib for the baby of white handkerchief linen, had three squares of lace set at intervals on the edge and trimmed with a ruffle of lace.

A Misnomer.

No wise person ever goes to a confidence man for confidence.

WEIGHT IS NOT ALL

MANY OTHER FACTORS IN DETERMINING BRAIN POWER.

When the Cells Are So Constituted as to Give Ability for "Team Work," High Intelligence Is Present.

Other factors besides brain weight are known to influence intelligence. It has long been known that the distinguishing character of the human brain is the large number of connecting fibers by which its cells are co-ordinated. In no other species are they so numerous or complicated. The cells constitute but a very small part of the weight. There is now considerable evidence that the same rule applies among individual men and that those of great intelligence have more connections, so that their cells can do more and better "team work."

Some investigations have shown the corpus callosum to have a large cross section in men who have shown great ability. It is also known that the brains of able men are likely to present more convulsions and deeper ones than the average, as if there were more brain cells as well as more connections. A few observations in the lower races point to the fact that their brains are essentially different in microscopic organization, partly accounting for less intelligence.

All these facts will fully explain why men of intelligence in the higher races may have brains not notably heavy, but they do not disprove the general statement that as a class such men do possess brains heavier than the average.

The mistake arises from the failure to recognize that noted men who have shown intellectual power not infrequently were sharply limited to one or two directions, being very defective in other directions. Blind Tom was an idiot, in fact—an extreme case of what is quite common. At the other extreme was Gambetta, who was not much more than an orator, whose cerebral speech centers were found to be highly developed. The rest of his brain was small, and his general intellectual power and judgment were decidedly defective. Ability in one or two lines may make a man famous, while he is really very defective, and his brain proves to be small.

Heavy brains are not necessarily intellectual ones, or elephants would be in the class of geniuses.

The material might also be pathologic and the possessor an imbecile. It often happens that men of big brain and great ability suffer from early neglect and are found in lowly employments or may remain ignorant through life. These few facts do not prove that large brains are worthless and not indicative of mental power as a rule. We cannot get away from the fact that man as an animal is supreme because of his large brain, that among races the brainiest are the highest, and that in any one race the most intelligent, as a rule, are those who have the most brains.

Men of small brains are not the leaders, and no statistics of the brain weights of a few exceptional men noted for limited abilities can reverse the rule. Universities do not create brains, but merely train what exists, so that the owners are better fitted for the battle of life. Many a man is sent to college who should be handling a pick and shovel, and he never amounts to much, even though he subsequently makes his living at some very limited specialty.

Girls, Wear White!

Frau Liebreich, a wealthy resident of Munich, is convinced that girls who wear white dresses get married sooner than girls who wear all sorts of colors. Accordingly, she has organized a "league of white women" among her friends, the members of which undertake to wear pure white for all important and ceremonial functions. In her address to the first members of the guild—some 20 fair maids of Munich—Frau Liebreich is reported to have said: "I loved my husband before he loved me, and he returned my affection only when he saw me accented in a white dressing gown. White is a symbol of pure love and thus appeals to the better half of the male creation. The plainest girl dressed in white will conquer hearts more rapidly than a beauty who stoops to the meretricious attractions of a hundred hues."

Millhand to Millionaire.

J. R. Booth, the Canadian railway magnate and lumber king, began life as a millhand. Now he possesses 6,000 square miles of timber land and is the largest owner in his own right of railways in British North America. As he drives about Ottawa in an old-fashioned buggy and simply dressed he would be taken for a comfortable farmer rather than a prince of industry. However, the close observer cannot fail to look a second time at the forceful, self-reliant and energetic countenance which looks out from under the soft felt hat.

Settled a Pretender.

The late Carl Schurz had no consideration for hypocrites or pretenders. Upon literary pretenders he was particularly severe. At a dinner in New York one night a millionaire who had written a volume of poems sneered at politics. "I wouldn't give a pica-yune," he said, "for a senatorship or a cabinet office. To be even president wouldn't tempt me. I, for my part, would rather be known any day as a third-rate poet than a first-rate statesman." "Well, aren't you?" shouted Mr. Schurz.

DECAY OF IMAGINATION.

Assertion Made That Civilization Is Not Only Killing Poetry, But Sense of Humor.

An Italian scientist thinks that civilization is not only killing poetry, but the sense of humor. Both depends upon the seen object suggesting other things to the mind, in one case congruous, in the other incongruous. Science has made our minds more rigid so that we see only what we see. "More rigid" means less vitalized.

Under new conditions at hand, we shall get back our vitality, shall once more have some to spare, once more be able to see the naked visible in its proper robes. Imagination is the seeing of real relations. It is seeing what we feel ought to be, which, when same, is a deeper seeing of what they are. Humor is imagination relaxing herself and playing the caricaturist. While she lives at all, she must be permitted to recreate. She thrives on the surplus age of mental vitality.

Nordau dwells somewhere on the tendency of artists he calls degenerate to paint everything more or less violet. One would suppose that every color, like every sound, must be yielding its overtones. Any one can see the color as it stands. It takes an artist to see—feel, "imagine"—its overtones and bring them down for us.—Student in the New Century.

INFERENCE WAS GOOD.

Dull Pupil Amazed Teacher by Giving Proof of Average Reasoning Power.

A Baltimore school-teacher was telling one day of how often the instructor of "the young idea" is astonished by the quickness of wit exhibited by the pupil who is otherwise deficient.

One day, says this teacher, she had encountered such a degree of ignorance and mental obtuseness on the part of one of her boys that she became disheartened. So it was with considerable sarcasm that she said to the youngster:

"I wonder if you could tell me whether George Washington was a soldier or a sailor."

The kid grinned. "He was a soldier, all right," was his reply.

"How do you know?" asked the weary teacher.

"Because I seen a picture of him crossin' the Delaware," explained the boy. "Any sailor'd know enough 'o' to stand up in a boat."

HARVARD MAN'S GRACE.

Familiarity of Petition Shocked Arizona Men Gathered for Thanksgiving Dinner.

A story is told about a young fellow just out of Harvard, who went to Arizona to find out what it was like. He was affected in his manner, after the English fashion, and around the neighborhood soon became something of a joke.

When Thanksgiving came, all the men without homes dined together, and before the feast it was arranged that the Harvard youth should be asked to say grace. The boys wanted to find out what sort of training he had received. When the gentleman at the head of the table requested the favor of him, he hesitated a moment, smiled weakly and lisped:

"Ouh Fathel!" with uplifted finger, and then "Jolly good lunch; thanks awfully, old chap."

Putting Her Foot in It.

Two girl friends met in the street and stopped to shake hands.

"So glad to see you, Grace," said the tubor-made Alice. "Was just on my way to ask you, as my oldest friend, to be one of my bridesmaids."

"Bridesmaids! How lovely! I did not know you were engaged," replied Grace.

"It's sudden, very sudden, but he's awfully in love, and is just too sweet to live. Will you act?"

"Act? Of course. I'll be charmed. But," moving forward and speaking in an undertone, "do come round the corner and tell me all about it. There comes that idiotic, irrepressible donkey, Jim Berton. He's grinning as though he meant to stop, and I don't care to be seen talking to him."

"Jim Berton? He's the man I'm going to marry!"

Cause for Celebration.

Bishop Talbot of central Pennsylvania is fond of relating amusing experiences while a missionary in the west. On one occasion he arrived at a mountain town and entered the hotel dining room, taking a seat. A resident who had been drinking fell into conversation with him. "I'm glad you've come here," said the man. "For the boys need somebody to give them advice. They drink a heap, I tell you." The bishop said: "I am sorry to hear that, my friend, but if you will pardon me, it seems as though you are troubled that way yourself." The mountaineer saw the point, but rejoined quickly: "Well, ye see, when the bishop comes a feller just has to celebrate some."

Foolish English "Smart" Set.

An American who has just returned from London expresses surprise mingled with disgust regarding the talk he heard among "smart" people there. For absolute silliness it was far ahead of anything he had ever heard. It is considered quite the thing to abbreviate words. He heard a grown woman say to a friend: "Isn't it terry to have neury on such a divey day?" Translated into English that means: "Isn't it terrible to have neuralgia on such a divine day?"

"GRAND OLD NAME"

"GEORGE" A PATRONYMIC HONORED AND REVERED.

Mr. Ade, Successful Author and Humorist, Gives Many Reasons Why This Should Be So—Historical "Facts."

To the anniversary number of his friend, George M. Cohan's cheerfully carry press sheet, "The Spot Light," George Ade contributes some reflections on the name George, the sum of his argument being that it's a grand old name for actor, author, manager or agent.

Have you ever figured out why people who wish to be emphatic say, "By George?" To swear by the Deity would be profane. To swear by Oscar or Herbert or Randolph would mean nothing. "George" has been adopted as the most important and awe-inspiring name that can be borrowed from the ordinary human list.

From the original St. George, patron saint of England, who is shown in his favorite lithograph to be fighting the syndicate, down to George Wilkes, the great trotting stallion, the name of "George" has always been the trademark of a live one. Every good Pullman porter is named George. If, when alighting at a one-night stand, you insist upon being hailed by "George," you will invariably get an upholstered back, with the blanket neatly folded, and not as much hay as you might expect.

George III. would have won if he had not given away so much weight in meeting the other Georges, adopted stepfather of George Washington, Jr. George is from the Greek, meaning "husbandman" or "farmer." "My parents were in right, but how about George Marlon, George Beane, George Nash, George Considine and George Caine?"

When you begin to count them, it is wonderful how the Georges loom up. There has been one George Francis Train in the last century, and George Alexander is to the English stage what George Dixon was to another department of art in this country.

When a woman wants to write under a man's name, she hurries to get in with the real Georges. Take the three greatest—George Eliot, George Sands and George Fleming.

Some people ask: "What's in a name?" Answer—"Everything." Can you see the Chicago public fighting to get into a show-shop to see a piece written by Egbert M. Cohan? And if my name had been Wilfred Ade, would I have been invited to write for the Spot Light? Suppose that George Bernard Shaw had been christened Sam Bernard Shaw, would "Man and Superman" have run all winter in New York? Think it over.

There's no use talking. "It's a grand old name."

Too Big a Field.

Years ago, while Reverend Shandoloupe was a student at the seminary, he undertook, one vacation season, to sell fire extinguishers.

His pleasing address and affability enabled him to make many sales. However, he encountered the usual rebuffs, which are the experience of all agents.

The theological student had gained access to the office of a surly broker, and forthwith began expatiating on the deluging powers of his incomparable fire extinguisher.

"To hell with it!" roared the broker, fiendishly.

"Oh, my dear man," expostulated Shandoloupe, "this extinguisher does not deserve the extreme virtue with which you credit it."—Harper's Weekly.

The Pope's Wardrobe.

The outward robe of the pope is red and made from the wool of the lambs of the convent of St. Agnes, near the Porta Pia. The cloak and cape are lined with purple and trimmed with gold lace; the sombrero, or hat, is red and has a gold cord and tassel. Beneath the cloak is worn an alb, made also of wool of the lambs of St. Agnes, and girt about the waist with a sash of white moire antique, garnished with gold fringe. The pope's hands and feet are covered with kid mittens and his feet are burdened with a pair of slippers worn over his ordinary shoes. The total value of his wardrobe is said to be \$150,000.

Where Titles Mean Much.

The question of title is one of the most delicate in Germany, a fact of which the stranger is constantly reminded in intercourse with the people, particularly with the women. Frau Professor, Frau Director, Frau Doctor are most particular about their husbands' titles when attached to their own names. But when it comes to military circles it is different, and both men and women protest vigorously against this sharing of titles. Lieut. von B— objects to having his wife addressed as Frau Lieutenant, which title belongs as well to the wife of Lieut. Schmidt or Hoff of a less aristocratic regiment.

Knew of One or Two.

"Is there any available substitute for rubber?" asked the instructor of the class. "Yes, sir," answered Miss de Muir, one of the fair coeds. "I think 'stare' or 'gape' is just as good."

Reward of Merit.

Engine drivers in Germany receive a sum of money and a gold watch for every ten years served without an accident.

THE GAME OF CLOCK GOLF

Good-sized Lawn Is Big Enough, and Anyone Can Prepare Ground for Playing.

No doubt some of our boys and girls are expert golfers, but most of them have no opportunity to play the game because one must have regular links, and they are few and far between, owing to the great stretches of ground they must cover. However, you can all play clock golf, and get nearly as much fun out of it as others do from the more pretentious game.

Your own lawn, or a neighbor's, will afford ample room. You need but one stick, a "putter," which you can buy for one dollar, or you can easily make one just as you make a "shiny" stick in the winter, or, better still, your old hockey club will be found just the thing.

Get 12 pieces of cardboard about four inches square and number them from one to 12. Then get some heavy wires or slender sticks, sharpened on one end, and glue one of the cardboards to each. Get a larger cardboard, mark it center, fasten it to another stick and place it in the center of the plot of ground you are going to use. By this center post dig a hole deep and wide enough to contain a tin can without a top. Sink the can in the hole so that its rim is just level with the ground. Stick the other numbered cardboards in an uneven circle about the center and, making your circle as large as your ground will permit, build a little "tee" or pile of earth by each number,

PLAYING CLOCK GOLF.

and you are ready to play. Your ball should be the regulation golf ball.

Place the ball on the tee by No. 1, and try to drive it into the hole in the center with one stroke. It is not at all likely that you will, but it will probably take you four or five. Then mark on a card the number of strokes you had to use, and go to the second tee, and so on until you have gone "all around the clock."

Place the ball on the tee by No. 1, and try to drive it into the hole in the center with one stroke. It is not at all likely that you will, but it will probably take you four or five. Then mark on a card the number of strokes you had to use, and go to the second tee, and so on until you have gone "all around the clock."

After a little practice, says Good Literature, you will be making almost every hole in two strokes, but it will be a long time before you can do it in "bogie," or the least number of strokes possible to the ordinary player. Some very fine players beat "bogie," which is usually placed at one stroke for every other hole, and two strokes for the remainder, or "around the clock" in eighteen strokes. You will improve your game almost every time you play, and you will find "clock golf" the best sort of practice for real golf. Clock golf is not to be despised by any means for lots of golf professionals play it a great deal, as it is the finest kind of training in putting.

FLYING-FISH.

Queer Creatures of the Sea Which Have Occupied the Attention of Scientists.

Flying-fish must have been watched ever since the first mariners ventured upon the sea, and yet the question of the manner in which they perform their flights is apparently unsettled. Dr. Abel, of the Austrian geological

survey, in a recent memoir on these fishes, maintains that the initial impetus by means of which they launch themselves is due to screw-like movements of the tail fin, and that the wings are in no sense propelling organs, but act simply as parachutes. On the other hand, says the Youth's Companion, it is maintained by other observers that the flight of flying-fishes is due to incessant and extremely rapid movements of their wing-like fins. It has been suggested that there may be differences in the manner of flight of different species of fish, and that consequently there may be truth in both views.

Taken at His Word.

A young motorist was endeavoring to convince a country innkeeper that the decay of coaching was more compensated by the spread of motoring as a pastime, says a writer in the St. James' Gazette. As a final argument, he stated that his car was of 40 horsepower, "the equal, sir, of ten relays of coach horses."

The next morning he read in his bill: "To feeding and stabling, 80 shillings." He asked the landlord for an explanation.

"The charge for 'osses, sir, is two shillings a head, sir," was the reply. "And I've your word, sir, that that machine is the same as 40 'osses, sir, so it comes to 80 shillings."

DEVOTED TO MAKING ADA A LARGER AND MORE PROGRESSIVE CITY

VOLUME 3

ADA, INDIAN TERRITORY, THURSDAY EVENING, AUGUST 9, 1906

NUMBER 119

MORE WATER! ADA THE COMING FACTORY TOWN MUST HAVE IT

Oceans of water! That's what Ada wants now. One might think this a curious cry right at this time of deluges. But the fact is a colossal enterprise is knocking at our doors, and all it requires of us is a big water supply the year around.

There have been indefinite rumors for some weeks of a big cement plant being established here by Northern capitalists, but nothing of a definite nature was made public, all of which verifies the old proverb "that still water runs deep." The enterprise has materialized far enough now to warrant publicity. There arrived in Ada Wednesday from the East the following capitalists: A. L. Beck and C. C. Bishop, of Chicago; Wm. L. Whitaker and J. H. Edwards, of Mitchell, Ind., and J. M. Wintersmith, of Louisville. Last night they held a meeting and organized a corporation to be known as the Oklahoma Portland Cement Company. The incorporation will be perfected under the laws of the territory as soon as the papers can reach South McAlester for filing. The company is capitalized at \$300,000, all paid up, the majority of the stock being taken by the incorporators, who are the gentlemen above mentioned, together with A. T. Howe

of Chicago; Peter Martin, of Huntington, Ind., and Geo. L. Kice, of Mitchell, Ind. The official roster of the company is as follows: A. L. Beck, president, C. C. Bishop, vice-president, J. M. Wintersmith, secretary-treasurer; Wm. L. Whitaker, general manager; the board of directors are: Beck, Wintersmith, Bishop, Martin and Kice. All of the stock is owned by non-residents and none is for sale.

Tersely stated, the purpose of the corporation is to manufacture cement, and on a big scale. Be it said in passing, this company has no connection with the Oklahoma City concern mentioned in a dispatch from that place a few days ago. In connection therewith one or more of these gentlemen's names were used, but entirely without authority. The company organized here owns 200 acres on the Frisco six miles south of Ada, acquired some time ago by Mr. Beck. The tract contains inexhaustible stores of limestone and cement shale. The plant for the manufacture of this raw product requires an enormous volume of water. If a sufficient supply of water is not forthcoming at Ada, the plant will be located somewhere on a big, reliable stream

The amount of \$300,000 is to be the initial outlay for building and equipping the plant. From this one may get some idea of its magnitude: The main building will be 300x600 feet, the machinery will include one engine of 750 horse power, two of 150 each, two of 75 each, and two of 15 horse power each. Operations will begin with an output capacity of 1,500 barrels per day, though shafting will be installed with a capacity looking to an eventual output of 3,000 barrels. To begin with the payroll will be as much as \$300 per day. The ground necessary for the plant will be about 30 acres, which land the city of Ada will be expected to donate.

Now, as to the water question—and there's the rub. For the output of 1,500 barrels of cement 1,500 gallons of water must be utilized every minute, or 2,160,000 gallons every 24 hours. The cement men today have been making a thorough inspection of the city's present supply. They find upon test that the city pump at its utmost capacity pumps only 156 gallons a minute, although it was bought to have a capacity of 500 gallons. Pumping thus for 2 hours the big city well was lowered 8 feet. Ada has always had a

bountiful supply of water for all domestic and business purposes, besides furnishing water for railroad engines, yet how insignificant looks the present well supply when one contemplates watering so thirsty a thing as this big cement plant. But the water must be forthcoming if we get the works. True, only about 12 per cent of the water would be necessarily lost. The remainder, after condensation from steam, could be run back and used again; but in such case it would have to go through a cooling process, and, containing much cylinder oil, it could not be mingled with the city supply.

These business visitors are practical men, know their business thoroughly. They are not begging for anything—want nothing as a gift. If they build at Ada their switching expenses from the source of supply would be enormous. They could locate on a good stream somewhere and the water would cost nothing; so they figure that Ada should and must furnish the water supply to compensate them for hauling the raw material from the quarry. Ada can't afford to miss this thing, even though it should suck every well in the county dry. We've either got to dig deep or dam high.

LATEST NEWS FROM FLOODED DISTRICTS

Oklahoma City, Ok., Aug. 8.—Rain bordering on cloudbursts has been falling at Oklahoma City and various portions of the two territories at intervals since Sunday afternoon, resulting in congested railroad traffic, damage to crops, flooded streets and basements, and overflowing streams. The damage will result in a loss of several thousand dollars.

The Atchison, Topeka & Santa Fe, Rock Island, Missouri, Kansas & Texas and Frisco railways out of this city report loss of bridges, inundated roadbed and numerous washouts.

From Purcell comes reports of numerous washouts and 200 feet of track under water.

At Lexington, Ok., just across the river from Purcell, Shoto creek is reported a half a mile wide, washing out the Santa Fe track to such an extent that it is necessary to detour trains via the Frisco from this city to Chickasha and thence to Ft. Worth, Texas, and Dallas over the Rock Island.

The Missouri, Kansas & Texas is enabled to operate trains from here to Kansas City, but on the Shawnee division all traffic is at a standstill on account of the loss of bridges coupled with some fifteen track washouts.

No trains are running on the Rock Island between this city and South McAlester, the track in some places being

under 4 feet of water.

Reports from many Oklahoma and Indian Territory flooded districts today indicate increased damage to crops and railways due to swollen streams, which are rising at a remarkable rate. No loss of life is reported, but considerable stock has been drowned.

SUPERINTENDENT WALKS.

W. E. Brown Takes a Tie Ticket from Konawa to Ada.

Muddy from head to foot, all haggard and torn, with a weary, melancholy expression upon his face, W. E. Brown, division superintendent of the M. K. & T., came strolling in today from Konawa. It was his duty to see the road, and he inspected it at the expense of a several hours' walk. We move a \$100 raise in salary, or promotion to the presidency of the road.

Rev. Sam Jones Dead.

Sulphur, I. T., Aug. 8.—Rev. Sam Jones, pastor of the Vinita Avenue Methodist church of this city, died last night at 10:30. He had been sick on since Thursday night.

J. P. Eddleman returned from Texas after a two months' visit there. He was accompanied by Miss Erma Thompson who will visit the Eddleman family.

OUR HENRY M. FURMAN AT WILBURTON IND. TERRITORY

Wilburton, I. T., Aug. 8.—The greatest political rally ever held in this district was held in the opera house under the auspices of the Jefferson Democratic club of Wilburton. The meeting was a representative one of the district, composed largely of members of the trades unions. Much interest was taken from the fact that the meeting was addressed by two of the ablest speakers ever in this part of the territory. The Democrats were represented by Henry M. Furman, who spoke for two hours to an enthusiastic and appreciative audience, and he was applauded to the echo, though no mention was made by him of his candidacy for the United States senate. His remarks were confined mostly to the necessary measures to come before the constitutional convention that are being advocated by the labor unions. He was followed by Mother Jones, whose date conflicted with his and who had no hall in which to speak, therefore the Democratic and Socialist committees agreed to divide the time with her as many of the miners here are Democrats and wanted to hear her speak, yet did not want to miss Furman's address. Furman courteously agreed to the arrangement.

Mother Jones spoke for about an hour, and it is said by old miners who have heard her in West Virginia and

Pennsylvania, that she does not make as good a speech for Socialism as she does organized labor unions. Nevertheless, she was listened to and liberally applauded by her listeners, particularly when she referred to Furman as the United States senator from Oklahoma, and advised all her adherents to vote for him.

NEGRO GAMBLERS.

Six Big Buck Negroes Spent Night in Calaboose.

Wednesday afternoon Ed Brentz and Jailor M. S. Adams arrested six negroes at the dives below the Compress. They were turned over to the city authorities and were acquitted this morning.

Bryan at Rome.

St. Louis, Mo., Aug. 8.—Homer Bassford, staff correspondent of the St. Louis Republic, tonight cabled his paper as follows: Rome, Aug. 8.—Mr. Bryan and his party did not call on the Pope today, owing to the fact that during Mr. Bryan's previous visit he was received in audience by the Holy Father.

The visitors went to St. Peter's, the Coliseum, the Roman Forum and other points of interest in and about the city.

Mr. Bryan left for Milan tonight. He expects to reach Paris by Friday.

OVERDRAFTS

It is becoming well known by business men that overdrafts, whether large or small, are not approved by the controller of the currency. The large central banks allow overdrafts only in a very small way, and this, it matters not how small, is not approved by the powers that be. This unbusinesslike habit of overdrafts grew out of advancing on moving products, such as cotton, grain and fat stock on the move. The overdraft system is wrong and the man whose account is always overdrawn is the man who spends more money than he makes and will finally have no bank account.

TWO VIEWS OF ADA GAS AND ELECTRIC CO'S PLANT

16th District's Big DEMOCRATIC RALLY!

The Democracy of the 16th District will rally in Ada

MONDAY, AUGUST 13

The leading orators and United States Senatorial candidates from Oklahoma will address the throng. Hon. Jack Beal of Dallas, Texas, the brilliant Texas Congressman, will be present. A large number of State and Congressional candidates will be the District's guests that day, and will be proud to meet the people. The Democrats of Ada will give a barbecue supper to all the visitors. Between the shoutings and oratory and the feasting there will be music by two of the leading brass bands of the Indian Territory.

The splendid tabernacle constructed by the citizens of Ada, where the exercises will occur, has comfortable seating capacity of nearly 3,000 people.

Monday will be the real opening of the county campaign. Scores upon scores of candidates and prospective candidates for county offices will be on hand, and vigilant. The presence of the Democracy of the 16th district is demanded.

All the Democrats and other good citizens who are seeking after the political truth, or who attach some value to the reliable news capacity of a paper are cordially invited, when in town, to visit the Ada Daily and Weekly News office and plant, situated on the corner of 12th and Broadway, just across from the big tabernacle.

DO NOT FAIL TO ATTEND

Advertising rates on application.

It is very important that the new railroads get their lines in time to handle the Ada country corn crop out.

A FARMER was in today from Sandy and reported that an ear of corn had worked out of a corn field and had lodged against the bridge. There is danger of the bridge giving away at any moment. Next.

CHAPMAN
The Shoe Man.

"TURN YE UNTO THE STRONG-HOLD YE PRISONERS OF HOPE"

Wednesday night's service at the tabernacle was an excellent one, notwithstanding the continued dampness kept some away. The preliminary song service was inspiring, particularly so were "Reapers of the Harvest," by the choir, and "Get Right With God," as rendered by Singer Martin. The latter song is the composition of Evangelist Oliver.

"Turn ye unto the stronghold, ye prisoners of hope; even today do I declare that I will render double unto thee," Zach. ix. 12. From this text Mr. Oliver preached a characteristic, strong sermon. His sermons are not easily condensed for publication; they come from his tongue already condensed. There's little superfluity to be omitted. Every digression, even, is a nugget and seems to form a vital, inseparable part of the discourse.

The text elaborated last night was a "military text," Mr. Oliver announced. The figure is of a stronghold of the ancients, a fortress set upon an eminence, a place of refuge, of safety from all foes. This is symbolical of the stronghold of God on high.

The awful distinction was drawn between prisoners of hope and prisoners of no hope. A vivid illustration of the latter class was painted: the condemned felon in despair behind the bars with the death warrant upon him. Considering the reclamation of the thief on the cross and of the Saul of Tarsus, the evangelist could not say just when hope for the sinner was gone; nevertheless, there was a day of despair. Also it is "not a matter of accident, but of choice, that one is without hope."

The stronghold is reached only by certain well defined highways. "The greatest of these highways is the Bible." Agnosticism came in for some severe ridicule. "A lightning bug," declared the evangelist, "sheds more light than all the agnostics in the world! A quarrel with the Bible is a quarrel against purity, against honesty, against honor." The audience was urged to search the Scriptures and were warned that they had "better never have heard of the Bible than to have one and not read it."

Another highway to the stronghold is that of prayer. The hour of prayer "is the time of victory of the soul." The necessity for and the sublimity of family prayers was indicated. "There is something wrong with him who does not hold them." The speaker pleaded for the "noble, prayerful home." One must stay intimate with God. Earthly popularity is vanity; "popularity with God is all that counts."

There is the highway of confession. Not only must sin be confessed to God, but also to the person wronged. You cannot evade the "thunderous truth from this old Bible; confess and give up sin!" And "you cannot go just half way. You must not merely, nominally join the church; you must join Jesus Christ." Those who compromise and procrastinate were roundly rebuked. He who purposed to join the church, but not until after the meeting is over, was likened to the patriot who would "join the army after the war is over." The speaker would have "men who come out boldly and let all heaven and earth and hell know where they stand." In the army of God the soldier must enlist, must be formally sworn in.

The grand converging of the highways is in the church. The speaker contended the conduct of him who affiliates with no particular church, who just drops around occasionally at any or all of them. "He is a religious hobo dropping in here and there for a hand-out." The essential character of the sacred rites, baptism, sacrament, etc., were accentuated.

In conclusion Mr. Oliver pointed to the Savior, the great mediator, ever ready to lead us safely into the stronghold sublime.

Texas Testimony.

Wharton, Texas, May 22, 1905. "Please ship 3 gross Dr. Mendenhall's Chill and Fever cure as per your quotations. We have been selling your chill cure for 6 years and think it the best chill tonic on the market."—L. B. Outler & Co., druggists. Sold by G. M. Ramsey, druggist.

SUPT. PERKINS RETURNS.

Prepared to Open the Public Schools Sept. 3.

M. L. Perkins, superintendent of Ada's schools, returned Wednesday, after finishing his summer school work in Texas. He came hither directly from Missouri where he has been visiting—or rather he came as directly as the high water would permit. In fact he had quite a strenuous trip, having to make a big detour and being delayed some two days. Mrs. Perkins will arrive next week.

The Superintendent is looking well and resolute for the duties of the approaching scholastic year. The schools will open September 3. With a good corps of fourteen teachers he is determined to make our public schools something to be particularly proud of.

Bryan May Visit Maine.

Washington, Aug. 8.—William J. Bryan is to be importuned upon his arrival in New York a few weeks hence to make a dash up to Maine and deliver one or two speeches in Congressman Littlefield's district. Announcement of this fact was made at the Democratic Congressional Headquarters today.

The Maine elections in September and especially the election in the second district are important forecasts of what may be expected throughout the country in November. If Littlefield be defeated through the aid of the organized labor movement against him, it will furnish inspiration for work elsewhere.

Although the popular subscriptions to the Democratic campaign fund to date total only \$4 a decidedly boastful spirit prevails at the headquarters. It is declared that some surprises are in store for chairman Jim Sherman of the Republican campaign committee, but that in the main quietness is going to be maintained regarding the vulnerable points of attack.

One secret disclosed today, however, was to the effect that the Democrats are counting on carrying five districts in the city of Chicago.

Galveston's Sea Wall

makes life now as safe in that city as on the higher uplands. E. W. Goodloe, who resides on Dutton St., in Waco, Texas, needs no sea wall for safety. He writes: "I have used Dr. King's new discovery for consumption the past 5 years and it keeps me well and safe. Before that time I had a cough which for years had been growing worse. Now it's gone." Cures chronic coughs, in grippe, croup, whooping cough and prevents pneumonia. Pleasant to take. Every bottle guaranteed at G. M. Ramsey's and F. Z. Holley's drug stores. Price 50c and \$1. Trial bottle free.

The End of the World

of troubles that robbed E. H. Wolfe, of Bear Grove, Iowa, of all usefulness came when he began taking Electric Bitters. He writes: "Two years ago kidney trouble caused me great suffering, which I never would have survived had I not taken Electric Bitters. They also cured me of general debility." Sure cure for all stomach, liver and kidney complaints, blood diseases, headache, dizziness and weakness or bodily decline. Price 50 cents. Guaranteed by G. M. Ramsey's and F. Z. Holley's drug stores.

A Mystery Solved

"How to keep off periodic attacks of biliousness and habitual constipation was a mystery that Dr. King's new life pills solved for me," writes John N. Pleasant, of Magnolia, Ind. The only pills that are guaranteed to give perfect satisfaction to everybody or money refunded. Only 25c at G. M. Ramsey's and F. Z. Holley's drug stores.

Found Dead on the Streets.

A young man was found dead on the streets of Baton Rouge, supposed to have died from a congestive chill, which could have been prevented by the timely use of Dr. Mendenhall's Chill and Fever Cure. Sold by G. M. Ramsey, druggist.

WAPCO BRAND

"TRADE FOLLOWS THE FLAG"

If you want PURE FOODS in cans, always insist upon the WAPCO BRAND. Wapco is a guarantee of "Pure Food."

Ours are the only food products owned and guaranteed by a TEXAS HOUSE. All goods packed expressly for us in various sections of the country, where the most perfect goods of each character are found. Packed only in Extra Standard Grades at Popular Prices. Ask your grocer for the Wapco Brand and if he does not keep them, send us his name.

The NICKEL STORE

Where You Save Money on Everything.

Quality and the best for the lowest price. We are buying and selling only merchandise that will give satisfaction to our customers, and meet all competition on quality and price, but we do not destroy other people's business. We have laid a foundation that is increasing our business by selling the right goods at the right time and at a satisfactory price. Merit is the trade mark of success. Better value at the price is the true test of cheapness. CASH—NO CREDIT TO ANYONE.

Fine Crockery

We just added to this department a new feature, the Colonial Gold Decorated Dinner Ware. The prices we intend putting on them will label them as bargains without our telling you.

Colonial Gold Decorated Cups and Saucers, 10c each or 60c a set.

7 inch plates of the same ware, gold decorated, 60c set.

10 inch platters, gold decorated, 15c each.

7 inch oval meat and vegetable dishes, 15c each.

Besides this line you will find many other dining room and kitchen necessities, convenient for inspection, all priced in plain figures.

Stoneware

We are selling Stoneware dirt cheap.

Milk Pans or Crock, 1 gallon, usual price 10c, our price 6c

Milk Pans or Crock, 2 gallon, usual price 20c, our price 12c

Tall jars, up to and including six gallon sizes, cost you 6c per gallon. You will find the tall jars particularly nice for putting up your kraut and pickles, etc.

6 gallon tall jars, usual price 60c, our price 36c

This shows you the saving nearly half.

Our Stationery Department

This is, has been and will be one of the most successful in the store. We sell pens, ink, mucilage, glue, composition books, ledgers, journals, day books, tablets both for pencil and ink, ruled and unruled. 5c.

We also in this department keep slates, slate pencils, school boxes and school supplies.

RECREATION HOURS

SUGGESTIONS FOR NOVEL AND PLEASING ENTERTAINMENTS.

A Lovely Crystal Wedding the Fortunate Guests Would Long Remember—A Most Attractive Summer Luncheon.

A Crystal Wedding.

The "crystal" wedding day comes 15 years after the date of the original ceremony, and is one of the very prettiest of all the anniversaries. The invitations may be written or painted upon sheets of thin, transparent celluloid, which is a very good substitute for glass, inclosing these cards in the regulation cream-colored envelope. It is best to have a reception with hours in the afternoon and evening, if there are to be many guests. The dining room may be made most attractive by keeping everything in white, spreading a canvas on the floor, using glass candlesticks and white candles, with the faintest of white shades. A pretty decoration is to have a large, handsomely ornamented cake in the center of the table, surrounded by 15 candles. Scatter bride roses over the cloth, or white sweet peas.

The tiny glass icicles for Christmas tree decorations are just the thing for an affair of this kind. Suspended from the chandeliers and gas jets, they catch and reflect the light in a most fascinating manner. In serving, glass must be used wherever possible. In Austria coffee is served in glass cups, and so the fashion could be introduced here in an occasion like this. Of course the bou-bons, salted nuts and olives will be in glass receptacles. In place of loaf sugar, substitute rock candy crystals in a cut glass bowl. If the hostess is the owner of any lamps or candlesticks with glass pendants, this is the time to bring them out.

If expense does not have to be considered, the tiny mirrors in metal settings would be charming souvenirs or place cards, the name written on the glass in red ink. A programme of wedding music would be an addition to this reception. As for the gifts to be given, there is an endless variety from which to select. Articles for the desk, toilet and table come in exquisite forms and colorings.

An Informal Luncheon.

"Come to luncheon at one, wear a suit and bring your thimble." So the little notes read that were received by eight young matrons one day last week. On an awning shaded porch the hostess welcomed her guests, and the maid passed tall tumblers of lemonade, in which three large, luscious cherries floated.

In the dining room, which was all in Delft blue, with blue and white draperies, the table was set with Japanese paper doilies, which come in all sizes and in a bewildering variety of colors. The hostess explained that those doilies were really the cause of the luncheon at this particular time, for everyone knew that she was preparing for an extended trip to the seashore. "I have a scheme to get you girls to help me out of a dilemma, which I'll make known after you have satisfied the inner man and are in a humor to be worked." And what an appetizing spread it was! A mass of scarlet geraniums filled a large copper bowl in the center of the table. Four copper candlesticks, shaded with scarlet, made a soft, beautiful light, the dishes were blue and the service plates of copper. They really belonged to a nut set, but were most effectively used in this way.

The first course was red California cherries dipped in water, then in powdered sugar, and chilled; they were on nasturtium leaves in tall glasses. Creamed chicken and mushrooms in pastry shells, green peas, and Saratoga potatoes came next, with the tiniest of baking powder biscuit. The salad was a fruit mixture, with cheese straws. Delicious cherry ice was the dessert, with lady fingers and macaroons. Iced tea with lemon juice passed in a small glass pitcher was served throughout the meal. A housekeeper will see what an easily prepared repast this was, yet how delicious.

"Now, prepare to work and be worked," said the hostess, and she produced a number of lingerie waists, which were all finished except sewing the lace on collars and sleeves. By five o'clock the last stitch had been taken and a delightful time credited to an already much beloved hostess, who said, in parting: "Many hands make light work."

Form of Introduction.

A young man on being presented to a young woman lifts his hat and bows. The young woman may extend her hand if she feels like doing so, but a smile and a friendly recognition are all that is necessary. You never introduce a girl to a young man, but you do introduce the young man to the girl. Thus: Miss B. may I present Mr. X.? Or: Mr. X. I want to introduce you to Miss B. Yes, you can always say that you are pleased to meet the young lady.

Lavender Lotion.

Borax must be used sparingly as a water-softening agent. It is extremely drying. Quite the most delightful beautifier for the purpose of softening the bathing water is our celebrated lavender lotion. If you use it once you will feel that you must always have it. The formula is most simple: Four ounces of alcohol, one-half ounce of ammonia, one dram of oil of lavender. The alcohol dilutes the ammonia and makes it safe to use, while the lavender gives a most delicious fragrance to the bath.

THE SUMMER GIRL'S DRESS

She Is Fond of Frills and Furbelows—Everything Is Light and Gay in Tone.

The 1906 summer girls will be frocked in frills and furbelows delightfully feminine, writes Helen Berkely-Lloyd in the Delineator for July. From parasol to boot tip, curves dainty touches, and artistic color effects will distinguish everything they wear. Their elders, too, make a generous use of color. They are permitting it to appear in their tweed frock coats and motor coats, and their afternoon and dinner gowns of light, alken fabrics, as are often of the new mauve-blue and the warm American Beauty shades of white or the always charming pastel tints.

The semi-tailored gowns, man-made though they are, emphasize feminine curves in a marked degree, and show the most graceful effects. The bolero is seen on a great many of these gowns, the shorter ones having a centre attached that is entirely new.

The sleeves, as a rule, are puffed to the elbow, or half-way to the wrist. They are finished with a velvet-inlaid cuff that flares considerably.

Among the little accessories that the summer girl is wearing are bracelets of black velvet held with jeweled buckles, and wisps of tulle twisted about the upper arm and the wrist, tied in fluffy bows. Arm or glove garters of satin ribbon, shirred over elastic and edged with frills of lace and ribbon are quite new, and as practical as they are ornamental.

NEAT INITIAL LETTERS.

Suitable for Marking House Linen and Having the Advantage of Being Easy to Work.

These letters are for marking house linen, blankets, etc., and may be

CROSS-STITCH INITIAL LETTERS.

worked with ingrain cotton, washing silk or wool, according to the texture of the articles to be marked.

They are easily made, the work goes quickly, the effect is very good.

Witches All Red Headed.

A curious fact in connection with witchcraft is said to be revealed by the old records of trials of accused persons. In each case, according to the Metaphysical Magazine, a lock of the hair of the supposed witch was attached to the documents. A person who has made a special study of these old papers declares that in every instance which has come under his observation the reputed witch must have been red headed.

Artificially aerated drinking waters were the invention of the chemist, Joseph Priestley, who in 1772 published his "Directions for Impregnating Water with Fixed Air in Order to Communicate to It the Peculiar Spirit and Virtues of Pyrmont Water and Other Mineral Waters of a Similar Nature." Some one has calculated the consumption of aerated waters in Great Britain and Ireland to amount to 200,000,000 gallons a year.

A Dry Shampoo.

There is nothing better as a dry shampoo than powdered orris root. It must be in a coarse powder, and the hair dusted well at night. If the brushing is not thorough there is danger of dandruff forming, so that part should be well done.

For Their Good Work.

Dr. E. W. Morley, professor of chemistry, and Dr. George Trumbull Ladd, professor of rhetoric, have been retired with Carnegie pensions from the faculty of the Western Reserve university.

A Bureau Set.

A dainty bureau set, made of white Persian lawn, embroidered in pale blue shadow embroidery, daisies tied with bow knots, was trimmed with a ruffle of lace.

A Bib for Baby.

A pretty bib for the baby of white handkerchief linen, had three squares of lace set at intervals on the edge and trimmed with a ruffle of lace.

A Misnomer.

No wise person ever goes to a confidence man for confidence.

WEIGHT IS NOT ALL

MANY OTHER FACTORS IN DETERMINING BRAIN POWER.

When the Cells Are So Constituted as to Give Ability for "Team Work," High Intelligence Is Present.

Other factors besides brain weight are known to influence intelligence. It has long been known that the distinguishing character of the human brain is the large number of connecting fibers by which its cells are co-ordinated. In no other species are they so numerous or complicated. The cells constitute but a very small part of the weight. There is now considerable evidence that the same rule applies among individual men and that those of great intelligence have more connections, so that their cells can do more and better "team work."

Some investigations have shown the corpus callosum to have a large cross section in men who have shown great ability. It is also known that the brains of able men are likely to present more convolutions and deeper ones than the average, as if there were more brain cells as well as more connections. A few observations in the lower races point to the fact that their brains are essentially different in microscopic organization, partly accounting for less intelligence.

All these facts will fully explain why men of intelligence in the higher races may have brains not notably heavy, but they do not disprove the general statement that as a class such men do possess brains heavier than the average.

The mistake arises from the failure to recognize that noted men who have shown intellectual power not infrequently were sharply limited to one or two directions, being very defective in other directions. Blind Tom was an idiot, in fact—an extreme case of what is quite common. At the other extreme was Gambetta, who was not much more than an orator, whose cerebral speech centers were found to be highly developed. The rest of his brain was small, and his general intellectual power and judgment were decidedly defective. Ability in one or two lines may make a man famous, while he is really very defective, and his brain proves to be small.

Heavy brains are not necessarily intellectual ones, or elephants would be in the class of geniuses.

The material might also be pathologic and the possessor an imbecile. It often happens that men of big brain and great ability suffer from early neglect and are found in lowly employments or may remain ignorant through life. These few facts do not prove that large brains are worthless and no indicative of mental power as a rule. We cannot get away from the fact that man as an animal is supreme because of his large brain, that among races the brainiest are the highest, and that in any one race the most intelligent, as a rule, are those who have the most brains.

Men of small brains are not the leaders, and no statistics of the brain weights of a few exceptional men noted for limited abilities can reverse the rule. Universities do not create brains, but merely train what exists, so that the owners are better fitted for the battle of life. Many a man is sent to college who should be handling a pick and shovel, and he never amounts to much, even though he subsequently makes his living at some very limited specialty.

Girls, Wear White!

Frau Liebreich, a wealthy resident of Munich, is convinced that girls who wear white dresses get married sooner than girls who wear all sorts of colors. Accordingly, she has organized a "league of white women" among her friends, the members of which undertake to wear pure white for all important and ceremonial functions. In her address to the first members of the guild—some 20 fair maidens of Munich—Frau Liebreich is reported to have said: "I loved my husband before he loved me, and he returned my affection only when he saw me accidentally in a white dressing gown. White is a symbol of pure love and thus appeals to the better half of the male creation. The plainest girl dressed in white will conquer hearts more rapidly than a beauty who stoops to the meretricious attractions of a hundred hues."

Millhand to Millionaire.

J. R. Booth, the Canadian railway magnate and lumber king, began life as a millhand. Now he possesses 6,000 square miles of timber land and is the largest owner in his own right of railways in British North America. As he drives about Ottawa in an old-fashioned buggy and simply dressed he would be taken for a prince of industry. However, the close observer cannot fail to look a second time at the forceful, self-reliant and energetic countenance which looks out from under the soft felt hat.

Settled a Pretender.

The late Carl Schurz had no consideration for hypocrites or pretenders. Upon literary pretenders he was particularly severe. At a dinner in New York one night a millionaire who had written a volume of poems sneered at politics. "I wouldn't give a picayune," he said, "for a senatorship or a cabinet office. To be even president wouldn't tempt me. I, for my part, would rather be known any day as a third-rate poet than a first-rate statesman." "Well, aren't you?" shouted Mr. Schurz.

DECAY OF IMAGINATION.

Assertion Made That Civilization Is Not Only Killing Poetry, But Sense of Humor.

An Italian scientist thinks that civilization is not only killing poetry, but the sense of humor. Both depends upon the seen object suggesting other things to the mind, in one case congruous, in the other incongruous. Science has made our minds more rigid so that we see only what we see. "More rigid" means less vitalized.

Under new conditions at hand, we shall get back our vitality, shall once more have some to spare, once more be able to see the naked visible in its proper robes. Imagination is the seeing of real relations. It is seeing what we feel ought to be, which, when sane, is a deeper seeing of what they are. Humor is imagination relaxing herself and playing the caricaturist. While she lives at all, she must be permitted to recreate. She thrives on the surplus age of mental vitality.

Nordau dwells somewhere on the tendency of artists he calls degenerate to paint everything more or less violet. One would suppose that every color, like every sound, must be yielding its overtones. Any one can see the color as it stands. It takes an artist to see—feel, "imagine"—its overtones and bring them down for us.—Student in the New Century.

INFERENCE WAS GOOD.

Dull Pupil Amazed Teacher by Giving Proof of Average Reasoning Power.

A Baltimore school-teacher was telling one day of how often the instructor of "the young idea" is astonished by the quickness of wit exhibited by the pupil who is otherwise deficient.

One day, says this teacher, she had encountered such a degree of ignorance and mental obtuseness on the part of one of her boys that she became disheartened. So it was with considerable sarcasm that she said to the youngster:

"I wonder if you could tell me whether George Washington was a soldier or a sailor."

The kid grinned. "He was a soldier, all right," was his reply.

"How do you know?" asked the weary teacher.

"Because I seen a picture of him crossin' the Delaware," explained the boy. "Any sailor'd know enough not to stand up in a boat."

HARVARD MAN'S GRACE.

Familiarity of Petition Shocked Arizona Men Gathered for Thanksgiving Dinner.

A story is told about a young fellow just out of Harvard, who went to Arizona to find out what it was like. He was affected in his manner, after the English fashion, and around the neighborhood soon became something of a joke.

When Thanksgiving came, all the men without homes dined together, and before the feast it was arranged that the Harvard youth should be asked to say grace. The boys wanted to find out what sort of training he had received. When the gentleman at the head of the table requested the favor of him, he hesitated a moment, smiled weakly and lisped:

"Ouh, Fatheh!" with uplifted finger, and then "Jolly good lunch; thanks awfully, old chap."

Putting Her Foot In It.

Two girl friends met in the street and stopped to shake hands. "So glad to see you, Grace," said the taller-made Alice. "Was just on my way to ask you, as my oldest friend, to be one of my bridesmaids." "Bridesmaids! How lovely! I did not know you were engaged," replied Grace.

"It's sudden, very sudden, but he's awfully in love, and is just too sweet to live. Will you act?"

"Act? Of course. I'll be charmed. But, moving forward and speaking in an undertone, 'do come round the corner and tell me all about it. There comes that idiotic, irrepressible donkey, Jim Berton. He's grinning as though he meant to stop, and I don't care to be seen talking to him.'"

"Jim Berton? He's the man I'm going to marry!"

Cause for Celebration.

Bishop Talbot of central Pennsylvania is fond of relating amusing experiences while a missionary in the west. On one occasion he arrived at a mountain town and entered the hotel dining room, taking a seat. A resident who had been drinking fell into conversation with him. "I'm glad you've come here," said the man, "for the boys need somebody to give them advice. They drink a heap, I tell you." The bishop said: "I am sorry to hear that, my friend, but if you will pardon me, it seems as though you are troubled that way yourself." The mountaineer saw the point, but rejoined quickly: "Well, ye see, when the bishop comes a feller just has to celebrate some."

Foolish English "Smart" Set.

An American who has just returned from London expresses surprise mingled with disgust regarding the talk he heard among "smart" people there. For absolute silliness it was far ahead of anything he had ever heard. It is considered quite the thing to abbreviate words. He heard a grown woman say to a friend: "Isn't it terry to have neury on such a divey day?" Translated into English that means: "Isn't it terrible to have neuralgia on such a divine day?"

"GRAND OLD NAME"

"GEORGE" A PATRONYMIC HONORED AND REVERED.

Mr. Ade, Successful Author and Humorist, Gives Many Reasons Why This Should Be So—Historical "Facts."

To the anniversary number of his friend, George M. Cohan's cheerfully carzy press sheet, "The Spot Light," George Ade contributes some reflections on the name George, the sum of his argument being that it's a grand old name for actor, author, manager or agent.

Have you ever figured out why people who wish to be emphatic say, "By George?" To swear by the Deity would be profane. To swear by Oscar or Herbert or Randolph would mean nothing. "George" has been adopted as the most important and awe-inspiring name that can be borrowed from the ordinary human list.

From the original St. George, patron saint of England, who is shown in his favorite lithograph to be fighting the syzandate, down to George Wilkes, the great trotting stallion, the name of "George" has always been the trademark of a live one. Every good Pullman porter is named George. If, when alighting at a one-night stand, you insist upon being hauled by "George," you will invariably get an upholstered hack, with the blanket neatly folded, and not as much hay as you might expect.

George III. would have won if he had not given away so much weight in meeting the other Georges, adopted stepfather of George Washington, Jr. George is from the Greek, meaning "husbandman" or "farmer." "My parents were in right, but how about George Marion, George Beane, George Nash, George Considine and George Caine?"

When you begin to count them, it is wonderful how the Georges loom up. There has been one George Francis Train in the last century, and George Alexander is to the English stage what George Dixon was to another department of art in this country.

When a woman wants to write under a man's name, she hurries to get in with the real Georges. Take the three greatest—George Eliot, George Sands and George Fleming.

Some people ask: "What's in a name?" Answer—"Everything." Can you see the Chicago public fighting to get into a show-shop to see a piece written by Egbert M. Cohan? And if my name had been Wilfred Ade, would I have been invited to write for the Spot Light? Suppose that George Bernard Shaw had been christened Sam Bernard Shaw, would "Man and Superman" have run all winter in New York? Think it over.

There's no use talking. "It's a grand old name."

Too Big a Field.

Years ago, while Reverend Shandoloupe was a student at the seminary, he undertook, one vacation season, to sell fire extinguishers.

His pleasing address and affability enabled him to make many sales. However, he encountered the usual rebuffs, which are the experience of all agents.

The theological student had gained access to the office of a surly broker, and forthwith began expatiating on the deluging powers of his incomparable fire extinguisher.

"To hell with it!" roared the broker, fendishly.

"Oh, my dear man," expostulated Shandoloupe, "this extinguisher does not deserve the extreme virtue with which you credit it."—Harper's Weekly.

The Pope's Wardrobe.

The outward robe of the pope is red and made from the wool of the lambs of the convent of St. Agnes, near the Porta Pia. The cloak and cape are lined with purple and trimmed with gold lace; the sombrero, or hat, is red and has a gold cord and tassel. Beneath the cloak is worn an alb, made also of wool of the lambs of St. Agnes, and gilt about the waist with a sash of white moire antique, garnished with gold fringe. The pope's hands and feet are covered with kid mittens and his feet are burdened with a pair of slippers worn over his ordinary shoes. The total value of his wardrobe is said to be \$150,000.

Where Titles Mean Much.

The question of title is one of the most delicate in Germany, a fact of which the stranger is constantly reminded in intercourse with the people, particularly with the women. Frau Professor, Frau Director, Frau Doctor are most particular about their husband's titles when attached to their own names. But when it comes to military circles it is different, and both men and women protest vigorously against this sharing of titles. Lieut. von B— objects to having his wife addressed as Frau Lieutenant, which title belongs as well to the wife of Lieut. Schmidt or Haaf of a less aristocratic regiment.

Knew of One or Two.

"Is there any available substitute for rubber?" asked the instructor of the class. "Yes, sir," answered Miss de Muir, one of the fair coeds. "I think 'stare' or 'gape' is just as good."

Reward of Merit.

Engine drivers in Germany receive a sum of money and a gold watch for every ten years served without an accident.

THE GAME OF CLOCK GOLF

Good-Sized Lawn Is Big Enough, and Anyone Can Prepare Ground for Playing.

No doubt some of our boys and girls are expert golfers, but most of them have no opportunity to play the game because one must have regular links, and they are few and far between, owing to the great stretches of ground they must cover. However, you can all play clock golf, and get nearly as much fun out of it as others do from the more pretentious game.

Your own lawn, or a neighbor's, will afford ample room. You need but one stick, a "putter," which you can buy for one dollar, or you can easily make one just as you make a "shinny" stick in the winter, or, better still, your old hockey club will be found just the thing.

Get 12 pieces of cardboard about four inches square and number them from one to 12. Then get some heavy wires or slender sticks, sharpened on one end, and glue one of the cardboards to each. Get a larger cardboard, mark it center, fasten it to another stick and place it in the center of the plot of ground you are going to use. By this center post dig a hole deep and wide enough to contain a tin can without a top. Sink the can in the hole so that its rim is just level with the ground. Stick the other numbered cardboards in an uneven circle about the center and, making your circle as large as your ground will permit, build a little "tee" or pile of earth by each number,

PLAYING CLOCK GOLF.

and you are ready to play. Your ball should be the regulation golf ball.

Place the ball on the tee by No. 1, and try to drive it into the hole in the center with one stroke. It is not at all likely that you will, but it will probably take you four or five. Then mark on a card the number of strokes you had to use, and go to the second tee, and so on until you have gone "all around the clock."

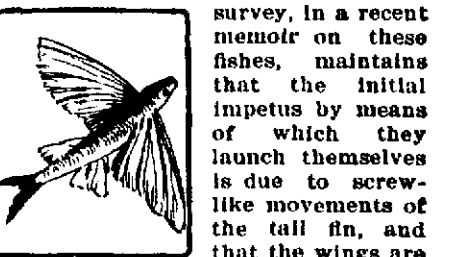

Place the ball on the tee by No. 1, and try to drive it into the hole in the center with one stroke. It is not at all likely that you will, but it will probably take you four or five. Then mark on a card the number of strokes you had to use, and go to the second tee, and so on until you have gone "all around the clock."

After a little practice, says Good Literature, you will be making almost every hole in two strokes, but it will be a long time before you can do it in "bogie," or the least number of strokes possible to the ordinary player. Some very fine players beat "bogie," which is usually placed at one stroke for every other hole, and two strokes for the remainder, or "around the clock" in eighteen strokes. You will improve your game almost every time you play, and you will find "clock golf" the best sort of practice for real golf. Clock golf is not to be despised by any means for lots of golf professionals play it a great deal, as it is the finest kind of training in putting.

FLYING-FISH.

Queer Creatures of the Sea Which Have Occupied the Attention of Scientists.

Flying-fish must have been watched ever since the first mariners ventured upon the sea, and yet the question of the manner in which they perform their flights is apparently unsettled. Dr. Abel, of the Austrian geological

survey, in a recent memoir on these fishes, maintains that the initial impetus by means of which they launch themselves is due to screw-like movements of the tail fin, and that the wings are in no sense propelling organs, but act simply as parachutes. On the other hand, says the Youth's Companion, it is maintained by other observers that the flight of flying-fishes is due to incessant and extremely rapid movements of their wing-like fins. It has been suggested that there may be differences in the manner of flight of different species of fish, and that consequently there may be truth in both views.

Taken at His Word.

A young motorist was endeavoring to convince a country innkeeper that the decay of coaching was more compensated by the spread of motoring as a pastime, says a writer in the St. James' Gazette. As a final argument, he stated that his car was of 40 horsepower, "the equal, sir, of ten relays of coach horses."

"The next morning he read in his bill: "To feeding and stabling, 80 shillings." He asked the landlord for explanation.

"The charge for 'osses, sir, is two shillings a head, sir," was the reply. "And I've your word, sir, that that machine is the same as 40 'osses, sir, so it comes to 80 shillings."
